INNOVATIVE PRODUCTS

STANDARD PRODUCTS

ISO 9001 quality procedures combined with **ENDURANCE TECHNOLOGY** for trouble-free installation and start-up.

- Over 35 distinct product lines detailed in over 4,000 web pages.
- User specified stroke length is standard.

MODIFIED PRODUCTS

Modified products, like this corrosion resistant B3S, extend the range of environments and applications where Tolomatic products can be found.

- Modifications include user specified tapped holes, materials, lubricants, coatings, and/or mounting brackets.

CUSTOM PRODUCTS

Challenges like this multi-axis actuator built to fit a manufacturer's motion, space and accuracy requirements are a regular part of our daily activities.

- Custom solutions for unique motion requirements.
- We will work with you to design a motion product within your space, budget, and time requirements.

QUALITY BUILT-IN WITH **ENDURANCE TECHNOLOGY**

- ENDURANCE TECHNOLOGY - our design principles are simple: make it durable and affordable. One recent customer remarked, "Your actuators are built like a tank and run like a deer!" We agree.
- 100% SATISFACTION GUARANTEE - customer satisfaction is the cornerstone of our business - and has been for over 50 years. Everything we do is for you.

DIFFERENCE

CUSTOMER SERVICE

- JUST A PHONE CALL AWAY - Expect prompt, courteous replies to all of your application and product questions. Check us out at 1-800-328-2174

- 5 DAYS BUILT-TO-ORDER - products assembled, tested and out the door in five days or less. Many products are shipped same day.

Our products will be there when you need them. Depend on Tolomatic!

TECHNICAL AND APPLICATION SUPPORT

- 3D models and 2D drawings on the web
- Available in all common formats.

The screenshot shows the Tolomatic website interface. The main content area displays technical drawings of a P-Profiled Rail Bearing Actuator in three views: front, side, and top. To the right of the drawings is a table of dimensions and specifications. The table has columns for different actuator sizes (25, 32, and 40 bore) and rows for various dimensions (A through S). The table data is as follows:

	MXP25	MXP32	MXP40
A	3.90	4.89	5.79
B	1.11	1.50	1.98
C	2.28	3.00	3.53
D	0.83	1.14	1.51
E	1.37	2.13	2.52

- Sizing and selection support - step by step instructions, specifications and performance data for every pneumatic product.

PRODUCT OVERVIEW

RODLESS CYLINDERS

BAND CYLINDERS

APPLICATIONS:

- Low to high thrust forces guiding and supporting light loads
- Good for vertical applications or with externally guided loads

FEATURES:

- Durable self-lubricating internal bearing performance tested for millions of cycles

APPLICATIONS:

- Low to high thrust forces guiding and supporting medium loads
- Loads with Mx (roll) moments

FEATURES:

- Mx (roll) moment capacity carrier design with self-lubricating bearings
- Trapezoidal bearing design maximizes bearing surface area for less pressure & less wear on bearing surfaces
- Isolated piston extends service life of the piston seals

APPLICATIONS:

- Low to high thrust forces guiding and supporting heavy loads
- High speed and precision
- Vertical orientation or cantilevered loads

FEATURES:

- Long life THK® Caged Ball® bearings
- Largest moment load capacity
- Low carrier height
- Isolated piston extends service life of the piston seals

COMMON FEATURES:

- Non-wear stainless steel bands
- Adjustable internal end-of-stroke cushion
- Single piece high strength piston up to 28% stronger than competition

COMMON OPTIONS:

- Tube clamps
- Auxiliary carrier
- Adjustable and fixed shock absorbers
- Single end porting
- Reed or solid state position sensors
- Foot mount
- Inch or metric mounting
- Floating mount (N & S bearings only)

SPECIFICATIONS:

	16	25	32	40	50	63
BORE in	.63	1.00	1.25	1.50	2.00	2.50
SIZE mm	16	25	32	38	50	64
MAX. STROKE in	206	206	205	203	168	103
MAX. STROKE mm	5232	5232	5207	5156	4267	2616
MAX. THRUST lb	136	349	546	786	1356	2184
MAX. LOAD lb	30	35	217	65	70	449
MAX. LOAD N	133	156	965	289	311	1997

*Auxiliary carrier doubles the load capacity and also increases My and Mz bending moment capacity.

APPLICATIONS:

- Low to high thrust forces, guiding and supporting medium loads

FEATURES:

- Mx moment capacity carrier design with self-lubricating bearings
- Adjustable carrier for maintaining consistent bearing surfaces
- Stainless steel retained bands
- Adjustable internal end-of-stroke cushion
- Formed steel piston bracket

OPTIONS:

- Auxiliary carrier
- Four ported head
- Foot mount
- Adjustable shock absorbers
- Reed or solid state position sensors
- Inch or metric mounting
- Floating mount
- Tube support

SPECIFICATIONS:

	05	10	12	15	20	25
BORE in	0.50	1.00	1.25	1.50	2.00	2.50
SIZE mm	12	25	32	40	50	63
MAX. STROKE in	175	283	280	278	158	238
MAX. STROKE mm	4450	7193	7132	7071	4023	6066
MAX. THRUST lb	71	347	534	783	1379	2202
MAX. LOAD lb	5.0	6.0	120	180	300	400
MAX. LOAD N	22	267	534	801	1334	1779

*Auxiliary carrier doubles the load capacity and also increases My and Mz bending moment capacity.

APPLICATIONS:

- Medium thrust forces, guiding and supporting heavy loads

FEATURES:

- Reliable, maintenance free bearing system
- Sealed integral ball bearings
- Hardened steel rail guides for high performance and repeatable accuracy
- Stainless steel retained bands
- Adjustable internal end-of-stroke cushion
- Integral mounting system
- Single end porting

OPTIONS:

- Auxiliary carrier
- Adjustable shock absorbers
- Foot mount
- Reed or solid state position sensors
- Inch or metric mounting
- Dual 180° carrier
- Tube supports

SPECIFICATIONS:

	10	15	20
BORE in	1.00	1.50	2.00
SIZE mm	25	32	50
MAX. STROKE in	205	205	120
MAX. STROKE mm	5207	5207	3048
MAX. THRUST lb	78	176	310
MAX. THRUST N	347	783	1379
MAX. LOAD lb	591	1454	2008
MAX. LOAD N	2629	6493	8832

*Auxiliary and dual 180° carrier doubles the load capacity and also increases My and Mz bending moment capacity.

APPLICATIONS:

- Small to large thrust forces, guiding and supporting light loads

FEATURES:

- Durable, patented self-lubricating bearing performance tested for millions of cycles
- Stainless steel retained bands
- Adjustable internal end-of-stroke cushion
- Economical price

OPTIONS:

- Auxiliary carrier
- Single end porting
- Foot mount
- Shock absorbers
- Reed or solid state position sensors
- Metric or english mounting
- Long carrier
- Floating mount
- Tube support

SPECIFICATIONS:

	06	10	12	15	20	25
BORE in	0.63	1.00	1.25	1.50	2.00	2.50
SIZE mm	16	25	32	40	50	63
MAX. STROKE in	211	210	208	206	156	211
MAX. STROKE mm	5359	5334	5283	5232	3962	5359
MAX. THRUST lb	32	78	120	176	310	495
MAX. THRUST N	142	347	534	783	1379	2202
MAX. LOAD lb	30	65	115	195	270	370
MAX. LOAD N	133.6	293.5	522.2	883.5	1222.5	1673.8

*Long and auxiliary carrier increases My and Mz bending moment capacity. Load capacity doubles with auxiliary carrier.

APPLICATIONS:

- Low thrust forces, guiding and supporting medium loads

FEATURES:

- Load-bearing carrier design with linear guide rods and ball bearings
- Wide precision machined table surface
- Stainless steel retained bands
- Adjustable internal end-of-stroke cushion
- Lightweight aluminum design

OPTIONS:

- Auxiliary carrier
- Base mounting plates
- Shock absorbers
- Proximity sensor
- Reed or solid state position sensors
- Inch or metric mounting

SPECIFICATIONS:

	05	10
BORE in	.50	1.00
SIZE mm	13	25
MAX. STROKE in	72	84
MAX. STROKE mm	1829	2134
MAX. THRUST lb	16	79
MAX. THRUST N	71	351
MAX. LOAD lb	10	100
MAX. LOAD N	44	445

*Auxiliary carrier doubles the load capacity and also increases My and Mz bending moment capacity.

See bending moments diagram at right (under PB)

Graphs are general performance comparisons between cylinders of similar (* bore) sizes with 12" stroke (PB2 6" stroke). Maximum thrust is based on air pressure of 100 PSI

MAG CYLINDERS

MG CYLINDER

APPLICATIONS:

- Environmentally sensitive applications that need low contamination
- If magnetic coupling strength is exceeded the piston and carrier will decouple - a safety benefit in many applications

FEATURES:

- Field repairable to minimize downtime
- Fully enclosed design keeps contaminants from entering or lubricants from exiting actuator body
- Three coupling strengths available
- Stainless steel tubing

OPTIONS:

- Pneumatic or hydraulic power
- Floating mount • Foot mount
- Reed or solid state position sensors

SPECIFICATIONS:

	025	038	062	100	
BORE SIZE	in	.25	.38	.62	1.00
	mm	6	10	16	25
MAX. STROKE	in	26	32	39	56
	mm	660	813	991	1422
MAX. THRUST	lb	5	11	28	72

MAGNETIC STRENGTH	lb	5	14	38	100
	N	22	62	169	445

MGC100

MGS SLIDE

APPLICATIONS:

- Environmentally sensitive applications that need low contamination
- If magnetic coupling strength is exceeded the piston and carrier will decouple - a safety benefit in many applications

FEATURES:

- Fully enclosed design keeps contaminants from entering or lubricants from exiting actuator body
- Low profile rigid design
- Stainless steel tubing
- Hardened steel shafts

OPTIONS:

- Pneumatic or hydraulic power
- Choose either sintered bronze or linear ball bearings
- Shock absorbers • Proximity sensors
- Reed or solid state position sensors

SPECIFICATIONS:

	038	062	100	
BORE SIZE	in	.38	.62	1.00

MGS100

CABLE CYLINDERS

CC DOUBLE-ACTING SA SINGLE-ACTING DP DOUBLE-PURCHASE

APPLICATIONS:

- Low to high thrust forces for loads that are externally guided and supported

APPLICATIONS:

- Used where gravity supplies return force
- Medium to high thrust forces for loads that are externally guided and supported

APPLICATIONS:

- Effectively doubles stroke length and speed
- Medium to high thrust forces for loads that are externally guided and supported

FEATURES:

- Nylon jacketed aircraft grade cables
- Unique gland seals provide tight seal for cables
- Adjustable internal end-of-stroke cushions
- Actuator may be located remotely from load and contamination
- Stroke lengths up to 60 feet with optional tube couplers

OPTIONS:

- Pneumatic or hydraulic power
- 3 ported head
- Seals of Viton® material
- Reed position sensors
- Automatic tensioner***
- Caliper disc brake***
- Tube coupler***

ROD CYLINDER SLIDES

PB POWER-BLOCK SLIDE

APPLICATIONS:

- Withstands heavy side loads
- Great for conveyor line stops
- Load lifting applications

FEATURES:

- Internal urethane bumpers
- Composite bearings
- Standard internal piston magnet for switch sensing
- Lightweight aluminum design

OPTIONS:

- Stop collars and bumpers
- Dual tooling plate option
- Reed or solid state position sensors

SPECIFICATIONS:

** Maximum thrust at 150 PSI

PB217

(PB2 rated up to 150 PSI). See www.tolomatic.com for complete performance information.

APPLICATIONS

ABT
MXP
BC2
BC3
BC4
LS
MG
CC
PB
ENGR

APPLICATION DESCRIPTION:

A manufacturer of ceramic blocks needed a method of stacking and moving heavy blocks for final packing. Speed, and power are critical; end-of-stroke position must be consistent. Tolomatic pneumatic products were chosen for this system.

APPLICATION REQUIREMENTS:

- Fast response; 1 block must be moved and stacked each 3 seconds
- Movement from end-of-stroke to end-of-stroke with consistent positioning
- High power; able to move 43 lb. ceramic blocks
- Low cost

TOLOMATIC SOLUTION:

This application uses a Tolomatic BC3 Band Cylinder. The BC3 was chosen because its high bending moment capacity allows it to support the high overhung load at the distance required.

APPLICATION DESCRIPTION:

A manufacturer of battery chargers needed a method of taking sheet metal off of pallets and placing onto the assembly line. Speed is critical and end-of-stroke position must be consistent, thus, Tolomatic pneumatic products were chosen for this system.

APPLICATION REQUIREMENTS:

- Fast response, 1 part must be reoriented and moved each 3 seconds
- Movement from end-of-stroke to end-of-stroke with consistent positioning
- Low cost
- End-of-stroke adjustment

TOLOMATIC SOLUTION:

This application uses a Tolomatic RCS Rod Cylinder Slide, attached to a BC3 Band Cylinder with adjustable shocks. This actuator assembly moves the vacuum grid attachment that holds the sheet metal.

APPLICATIONS

APPLICATION DESCRIPTION:

A manufacturer needed a method to stamp information on a plastic case.

APPLICATION REQUIREMENTS:

- Fast response, less than 1 second
- Movement from end-of-stroke to end-of-stroke with consistent positioning
- Relatively high force applied

TOLOMATIC SOLUTION:

This application uses a single Power-Block2 and custom adapter plate with customer's heat stamper.

APPLICATION DESCRIPTION:

A manufacturer of automated spray booths needed actuators to open and close the doors on the spray booth. The doors were already guided and supported.

APPLICATION REQUIREMENTS:

- Fast response; doors to open (close) within 2 seconds
- Movement from end-of-stroke to end-of-stroke with consistent positioning
- Low cost
- End-of-stroke cushioning

TOLOMATIC SOLUTION:

This application had used a competitor's band cylinder in previous designs. The BC4 was chosen because it had the same envelope as the other band cylinder yet offered lower cost, with longer cylinder life. Because thousands of these spray booths are being made, the spray booth manufacturer was able to create a better product and improve its bottom line.

APPLICATIONS

With over 50 years of application proven experience, Tolomatic pneumatic products are key components in the following industries and applications:

INDUSTRY INSTALLATIONS

- Packaging
- Automotive
- Food and Beverage
- Material Handling & Conveying
- Plastic Injection Molding
- Metal Processing
- Paper and Textiles
- Medical
- Electronics
- Printing
- and More ...

APPLICATIONS

- Material Handling
- Part Transfer
- Part Advancement
- Part Sorting
- Cutting
- Elevators
- Palletizing
- Door Closure
- Conveyors
- Robotics
- Machine Tools
- General Automation
- and More ...

THE RODLESS ADVANTAGE

TOLOMATIC RODLESS BAND CYLINDERS GET THE JOB DONE IN LESS SPACE THAN ROD STYLE CYLINDERS

Consider this: A rodless band cylinder contains its stroke within the cylinder itself. A 2" bore cylinder with a 24" stroke can provide a 43% space savings when compared to an equivalently sized rod cylinder. In addition, the load is supported throughout the entire stroke so there is minimal load deflection when compared to rod style cylinders.

With a Tolomatic Band Cylinder, there is no concern about rod rotation. Also, because rodless cylinders have equal piston areas in both directions, the cylinder experiences zero load variation in either direction.

GO RODLESS AND SAVE SPACE!

ROD STYLE vs RODLESS FEATURE COMPARISON

Feature	Tolomatic Rodless	Rod Style
Integrated Load Support	✓	—
Space Saving Design	✓	—
Piston Seals Isolated from Load	✓	—
Internal Air Cushioning	✓	✓

Tolomatic offers a complete line of linear motion products. We offer more rodless cylinder styles than any other company. Guided rod style actuators compliment our broad line of rodless pneumatic products.

● INNOVATIVE RODLESS PRODUCTS

Tolomatic created the rodless cylinder industry when we manufactured the original cable cylinder. For over 50 years, Tolomatic has been recognized as the rodless cylinder market leader. We earn that distinction daily by satisfying customers like you.

● ENDURANCE TECHNOLOGYSM

Every Tolomatic pneumatic product is designed and built with Endurance TechnologySM. Material selection, from seals to finish, and every other design element is optimized for long life and excellent performance. The result is the best value and best performing pneumatic product in the market today. As one customer recently told us, "Your cylinders are built like a tank and run like a deer." Thank you!

● TRUST YOUR APPLICATION TO THE RODLESS LEADER

When you want the job done right, go with the experts. Long life. Durability. Ruggedness. Built to your specifications in 5 days or less. Only one company specializes in rodless technology. Tolomatic. The rodless leader.

Be sure to visit www.tolomatic.com for up-to-date product specifications, free sizing and selection software, and 3D CAD solid files.

Power Transmission

- *Float-A-Shaft®* and *Slide-Rite®* right-angle gearboxes turn power around any corner.
- *Caliper disc brakes* in mechanical, hydraulic, pneumatic and spring-applied models offer a wide variety of industrial stopping power.
- *Disc cone clutches* with high torque output and non-slip, dependable performance.

Pneumatic Actuators

- *Largest selection of rodless cylinders* in band, cable, and magnetically coupled styles with a wide range of load capacities.
- *Rod slides* for maximum force in a short stroke package, perfect for conveyor stops or load lifting applications.
- *Vane rotary actuators* offer high torque density in a corrosion resistant housing.

Electric Actuators

- *Rod screw actuators* for maximum thrust in short stroke applications. Guided screw models are available for applications that require additional guidance.
- *Integrated motor actuators* in both roller and ball screw technologies deliver high thrust capacities and 100% duty cycle.
- *Rodless screw and belt designs* solve a wide range of moment, load, precision, speed, and performance requirements.

More solutions. Built to last.

Drives & Motors

- *Brushless servo controllers, drives and motors* provide smooth, quiet operation and high performance.
- *Microstepping controllers, drives and motors* achieve precise positioning at economical prices.
- *Easy-to-use, Windows® based programming and setup software.*

Customized Products

- *Quick turnaround on custom modifications* to Tolomatic standard products.
- *Linear motion solutions with custom design and prototype services.*
- *Your Motor Here* program matches a Tolomatic actuator to customer motor and supplies the in-line motor adapter plate free of charge, mounted and shipped with the actuator.

Service & Tech Support

- *Fast service and full technical support.*
- *All catalog products are built-to-order and shipped in 5 days or less.*

5 DAYS

INTRODUCING THE MXP BAND CYLINDER – DESIGNED TO OUTLAST EVERY RODLESS CYLINDER ON THE MARKET

The MXP pneumatic rodless cylinder is exactly what you expect from the industry's number one rodless supplier. Designed with our exclusive ENDURANCE TECHNOLOGYSM features, the MXP delivers superior performance to meet the most demanding applications. Nobody knows rodless like Tolomatic, and the MXP proves it.

- **DURABLE BEARINGS.** Three bearing choices to match your application needs. Profiled rail design uses THK[®] Caged Ball[®] technology to reduce friction and extend actuator life. Solid bearing design reduces stress concentration for optimum performance. Internal bearing design is permanently lubricated for long, trouble-free service.
- **DURABLE BANDS.** Stainless steel bands are stronger and will not elongate like elastomer (non-metallic) bands, providing reliable sealing over the life of the actuator.

[N]-INTERNAL BEARING

- Low cost solution for applications with limited load and bending moment requirements
- Lowest breakaway pressure
- Best in many vertical applications
- Permanently lubed internal bearing

[S]-SOLID BEARING

- Increased Mx moment capacity
- Large bearing surface contact area optimizes stress distribution on bearing for long service life
- Large carrier mounting pattern for more load stability and compatibility with existing BC2 applications
- Engineered bearing material does not require additional lubrication
- Solid bearings are field replaceable

[P]-PROFILED RAIL

- THK[®] Caged Ball[®] bearings with reduced friction for reliable service life
- High load and bending moment capacities
- Low profile to fit your application
- High precision bearings feature smooth, low breakaway motion

SELECT THE PERFORMANCE YOU NEED

Choose from: • Three Bearing Models • Six Bore Sizes • Built to Your Specified Stroke Length!

MOMENT & LOAD CAPACITY COMPARISON

Graph for model comparison, data from MXP40, 38mm (1.5") bore

INTERNAL BEARING

ENDURANCE TECHNOLOGYSM

STAINLESS STEEL BANDS

- Both interior sealing band and exterior dust band made of fatigue resistant stainless steel

STAINLESS STEEL IS DURABLE, FLEXIBLE AND CORROSION RESISTANT

- Does not stretch like bands made of rubber or polymer materials
- Stainless steel sealing bands resist blow out during pressure spikes that may occur during high velocity cushioning

RETAINED DUST BAND

- Retained dust band keeps contaminants from entering the cylinder interior, protecting components for reduced maintenance and increased uptime

INTERNAL BEARINGS

- Design maximizes piston bearing surface area for less pressure on bearing surfaces, less pressure results in less wear
- Permanent lubrication for low friction and extended bearing life
- Internal location provides protection from external contaminants, extending life

POSITIVE POSITION SEALS

- Sturdy U-cup base section assures positive positioning of seal lip for better sealing and less wear
- Made of custom formulated polyurethane for pliable, wear resistant seal lip

DIRECT MOUNT

- Head bolts are tapped for direct mounting

INCH OR METRIC MOUNTING

- Your choice of inch (US standard) or metric fasteners for carrier and head bolt mounting

PORTING CHOICES

- 4-ported heads are standard to allow air connections on sides, end or bottom
- Single-end porting allows convenient one end air connection
- NPT, Metric Parallel (ISO-G/BSP) & Metric Taper (Rc/BST) available on both metric and inch (US standard) mount actuators

ABT

BC3

BC4

LS

MG

CC

PB

ENGR

NON-WEAR BAND RETENTION

- Magnetically retained bands are not subject to wear as are mechanically retained systems
- Immediate band engagement and release results in less drag on piston for lower breakaway force during initial carrier movement

DUST WIPER

- Formed end cap and side dust wipers keep contaminants from entering the cylinder's internal area

ADJUSTABLE CUSHIONS

- Easy screw adjustment for smooth deceleration protecting actuator from high stress at end-of-stroke
- Adjustable cushions with retained stainless steel needle screw for increased safety

NOTE: Boxed letters indicate ordering codes

HIGH STRENGTH PISTON

- Single piece extrusion for piston bracket and carrier reduces failure points
- Piston bracket neck cross-sectional area is up to 28% greater than competitive designs, providing increased durability

INTERNAL MAGNETS

- Standard feature that allows sensor installation on left, right or bottom of the extrusion

25mm PISTON BRACKET
MINIMUM CROSS-SECTIONAL AREA (mm²)

OPTIONS

AUXILIARY CARRIER **D****W**

- 2X higher Fz (load) capacity
- High bending moment capacity

FLOATING MOUNT **F****L**

- Compensates for non-parallelism between MXP band cylinder and externally guided load

TUBE CLAMPS **T****C**

- Used for intermediate support
- Flush with bottom of actuator to retain low profile
- Drop-in, adjustable mounting locations

FOOT MOUNTS **F****M**

- For end mounting of MXP band cylinder
- Use to bottom or side mount actuator

SHOCK ABSORBERS **A****L** **S****L** **A****H** **S****H**

- Allows increased operating speed and load
- Self-compensates for load or speed changes
- Minimizes impact load to equipment
- Fixed or adjustable position shocks

SINGLE-END PORTING **S**

- Convenient single-end air connection (not available on MXP16)

SWITCHES

- Wide variety of sensing choices: Reed, Solid State PNP or NPN, all available normally open or normally closed
- Flush mount, drop-in installation, anytime
- Bright LEDs, power & signal indication
- CE rated, RoHS compliant

S SOLID BEARING

ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

STAINLESS STEEL BANDS

- Both interior sealing band and exterior dust band made of fatigue resistant stainless steel

STAINLESS STEEL IS DURABLE, FLEXIBLE AND CORROSION RESISTANT

- Does not stretch like bands made of rubber or polymer materials
- Stainless steel sealing bands resist blow out during pressure spikes that may occur during high velocity cushioning

RETAINED DUST BAND

- Retained dust band keeps contaminants from entering the cylinder interior, protecting components for reduced maintenance and increased uptime

POSITIVE POSITION SEALS

- Sturdy U-cup base section assures positive positioning of seal lip for better sealing and less seal wear

- Made of custom formulated polyurethane for pliable, wear resistant seal lip

INTERNAL MAGNETS

- Standard feature that allows sensor installation on left, right or bottom of the extrusion

ISOLATED PISTON

- Unique design isolates the piston from the applied load, extending the service life of the piston seals

- Piston remains isolated even when the carrier is deflected under load
- Piston bracket and carrier feature single piece extrusions, reducing failure points

DIRECT MOUNT

- Head bolts are tapped for direct mounting

INCH OR METRIC MOUNTING

- Your choice of inch (*US standard*) or metric fasteners for carrier and head bolt mounting

PORTING CHOICES

- 4-ported heads are standard to allow air connections on sides, end or bottom
- Single-end porting allows convenient one end air connection
- NPT, Metric Parallel (ISO-G/BSP) & Metric Taper (Rc/BST) available on both metric and inch (*US standard*) mount actuators

- Formed end cap and side dust wipers keep contaminants from entering the cylinder's internal area

ADJUSTABLE CUSHIONS

- Easy screw adjustment for smooth deceleration protecting actuator from high stress at end-of-stroke
- Adjustable cushions with retained stainless steel needle screw for increased safety

LARGE FLEXIBLE MOUNTING PATTERN

- Carrier gives more load stability
- Compatibility with existing BC2 applications
- More fastening options

NON-BINDING BEARING ARMS

- Bearings are tensioned indirectly, providing bind free adjustment

TRAPEZOIDAL BEARINGS

- Trapezoidal design maximizes bearing surface area for less pressure on bearing surfaces; less pressure results in less wear
- Engineered bearing material has low static and dynamic friction with low wear properties for long lasting, smooth operation
- Bearings are field replaceable for extended service life

NOTE: Boxed letters indicate ordering codes

OPTIONS

AUXILIARY CARRIER **DW**

- 2X higher Fz (load) capacity
- High bending moment capacity

FLOATING MOUNT **FL**

- Compensates for non-parallelism between MXP band cylinder and externally guided load

TUBE CLAMPS **TC**

- Used for intermediate support
- Flush with bottom of actuator to retain low profile
- Drop-in, adjustable mounting locations

FOOT MOUNTS **FM**

- For end mounting of MXP band cylinder
- Use to bottom or side mount actuator

SHOCK ABSORBERS **ALSLSL** **AHSH**

- Allows increased operating speed and load
- Self-compensates for load or speed changes
- Minimizes impact load to equipment
- Fixed or adjustable position shocks

P PROFILED RAIL

ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

CAGED BALL[®] BEARINGS

- THK[®] Caged Ball[®] bearings are used to reduce friction and extend actuator life
- Caged Ball[®] technology creates a grease pocket between ball elements, reducing friction, noise and maintenance
- Large permissible moment loads
- Low profile caged ball bearings
- High speed operation, low heat generation
- High precision, smooth, low friction motion

INTERNAL MAGNETS

- Standard feature that allows sensor installation on the open side or bottom of the extrusion

POSITIVE POSITION SEALS

- Sturdy U-cup base section assures positive positioning of seal lip for better sealing and less seal wear
- Made of custom formulated polyurethane for pliable, wear resistant seal lip

STAINLESS STEEL BANDS

 M_y _____
 M_z _____

FINAL VELOCITY _____

in/sec (U.S. Standard) mm/sec (Metric)

MOVE TIME sec. _____

NO. OF CYCLES _____

per minute per hour

The process of selecting a load bearing actuator for a given application can be complex. **It is highly recommended that you contact Tolomatic for assistance in selecting the best actuator for your application.** The following overview of the selection guidelines are for educational purposes only.

2 DETERMINE BORE SIZE

- Consult the Theoretical Force vs. Pressure graph. (See graph at right)
- Find the intersection of the available pressure and required thrust force. If the intersection falls below the plotted bore size curve, the actuator will supply adequate force for the application. If the intersection is above the curve, a larger cylinder bore size will be required.

NOTE: Additional force may be required to obtain the necessary acceleration within desired cycle time.

3 COMPARE LOAD TO MAXIMUM LOAD CAPACITIES

Calculate the following static loads: M_x , M_y , M_z , F_y , F_z

Loads = Applied Moments + Forces

If the load of your application exceeds figures indicated in the MOMENT AND LOAD CAPACITY tables (See pages MXP_14-19) consider:

- 1.) Higher capacity bearing style, i.e. **N** to **S**, **S** to **P**
- 2.) Larger Bore Cylinder
- 3.) Auxiliary Carrier
- 4.) Add External Guides

Contact information: _____

STOP Fax (1-763-478-8080) or call Tolomatic (1-800-328-2174) with the above information. We will provide any assistance needed to determine the proper MXP Band Cylinder.

4 CALCULATE LOAD FACTOR L_F

For combined loads the Load Factor (L_F) must not exceed the value 1.

$$L_F = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1$$

If L_F exceeds the value 1, then consider the four choices listed in step #3.

SHOCKS

If the intersection of the final velocity and load mass falls in the shaded regions, then shock absorbers should be used.

6 CONSIDER PEAK DYNAMIC INERTIA MOMENTS

When a rigidly attached load mass is accelerated or decelerated, its inertia induces

are excessive, consider the four choices listed in step #3 or consider these deceleration methods:

- Reduce final velocity with flow controls or reduced pressure.
- Pneumatic valve deceleration circuits. By reducing the speed before the cushion or shock is reached, the load can decelerate over a longer distance, thereby reducing the deceleration moments.
- Position shock absorbers at the load's center of gravity. This will greatly reduce the moment load applied to the carrier.

PROFILED RAIL DECELERATION CONSIDERATIONS

While the **P** Profiled Rail MXP is capable of carrying very large loads, consideration must be given to how to stop the load at the end of stroke. If Tolomatic cushions or shocks are used, stay within the specifications defined. If another type of shock absorber is used, be sure that the deceleration of the load is smooth and over an adequate distance.

7 DETERMINE TUBE CLAMP REQUIREMENTS

- Consult the Tube Clamp Requirement chart for the model selected (page MXP_23-24).
- Cross-reference the load force and maximum distance between supports.
- Divide stroke length by max. distance calculated above to determine number of tube clamps to order.

8 CONSIDER PORTING AND OPTIONS

- Choose Single End Porting or Dual End Porting

- Choose NPT, Metric Parallel (ISO-G/BSP) or Metric Taper (Rc/BST) Ports

OPTIONS:

- Switches – Reed, Solid State PNP or NPN, all available normally open or normally closed
- Shock Absorbers – Heavy or light duty, fixed or adjustable mount – recommended for longer life in most applications
- Foot Mounts
- Floating Mount Bracket – used when lack of parallelism occurs between the cylinder and an externally guided and supported load. Available for **N** internal & **S** solid bearing styles

5 DETERMINE CUSHION & SHOCK CAPACITY

Consult the Cushion and Shock Absorber Performance charts for the model selected (see page MXP_22). The velocities listed on the cushion charts are final or impact velocities. If the final or impact velocity is not known, use of valve deceleration circuits or shock absorbers should be considered.

CUSHIONS

Find the intersection of the final velocity and load mass. If the intersection is below the diagonal lines, the internal cushions on the actuator may be used.

bending moments on the carrier. The magnitude of these inertia moments can be larger than the applied loads. Careful attention to how the load is decelerated at the end of stroke is required for extended actuator performance and application safety.

Evaluate the dynamic inertia moment data:

- 1.) The length of deceleration distance
- 2.) The load attached to the carrier
- 3.) The distance of the load mass center of gravity from the carrier, and
- 4.) The final velocity of the carrier.

If dynamic inertia moments

S SOLID BEARING 2:1 RULE

For applications using **S** solid bearings, binding or interrupted motion may occur if the load offset is equal to or greater than twice the bearing length (1X). *LOAD OFFSET* is defined as: the distance from the applied force (or the load center of gravity) to the centerline of the carrier.

If the load offset cannot be changed consider:

- 1.) Higher capacity bearing style, i.e. **S** to **P**
- 2.) Larger Bore Cylinder
- 3.) Auxiliary Carrier
- 4.) Add External Guides

	Metric	64 mm	13.6 N-m	201 N-m	24.4 N-m	1,646 N	2,184 N

⚠ Ratings are the maximum values for shock-free, vibration-free operation in a typical industrial environment. Contact Tolomatic for assistance in selecting the most appropriate actuator for your application.

The moment and load capacity of the actuator's bearing system is based on an L10 life of 200,000,000 linear inches of travel. Life of the actuator will vary for each application depending on the combined loads, motion parameters and operating conditions. The load factor (L_F) ratios for each application must not exceed a value of 1 (as calculated below). Exceeding a load factor of 1 will diminish the actuator's rated life.

$$L_F = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1$$

With combined loads, L_F must not exceed the value 1.

NOTE: Mating surface of component mounted to carrier must maintain a flatness of at least 0.0015" (0.040 mm)

Ratings are the maximum values for shock-free, vibration-free operation in a typical industrial environment. Contact Tolomatic for assistance in selecting the most appropriate actuator for your application.

Use sizing software or call Tolomatic (1-800-328-2174) with application information. We will provide any assistance needed to determine the proper MXP band cylinder.

The moment and load capacity of the actuator's bearing system is based on an L10 life of 200,000,000 linear inches of travel. Life of the actuator will vary for each application depending on the combined loads, motion parameters and operating conditions. The load factor (L_F) ratios for each application must not exceed a value of 1 (as calculated below). Exceeding a load factor of 1 will diminish the actuator's rated life.

$$L_F = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1$$

With combined loads, L_F must not exceed the value 1.

SPEED FACTOR

FOR APPLICATIONS WITH HIGH SPEED OR SIGNIFICANT SHOCK AND VIBRATION: Calculated values of loads and bending moments must be increased by speed factor from the graph at right to obtain full rated life of profiled rail bearing system.

PROFILED RAIL LUBRICATION

Proper lubrication of profiled rail bearing system is essential for normal operation and achievement of full rated life of MX--P actuators. Lubrication should be performed at intervals of 4,000,000 inches of travel or once every year, whichever occurs first. **However, operating conditions such as high speed or significant shock and vibration may require more frequent lubrication.** Please consult Tolomatic for recommendations.

Recommended grease types:

1. Refined mineral oil-based multi-purpose grease with lithium thickening agent.
2. High-grade synthetic oil-based grease with urea thickening agent.

TIPS FOR MAXIMIZING BAND CYLINDER LIFE

TO GET THE MOST LIFE OUT OF YOUR MXP BAND CYLINDER FOLLOW THESE SIMPLE GUIDELINES WHEN SIZING A BAND CYLINDER FOR AN APPLICATION.

Four factors that affect the life of a band cylinder are **Load, Speed, Environment and Deceleration**. The following tips will help you select the appropriate band cylinder for a specific application's loads and speeds to maximize actuator life.

1 LOAD: KEEP THE LOAD FACTOR LESS THAN 1

Applications with multiple loads put additional stress on the band cylinder's bearing system. It is important to account for all these loads to make sure the bearing system is not over loaded. Both static and dynamic loads need to be addressed.

The formula below can be used to calculate the load factor:

$$L_f = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1$$

2 SPEED: REDUCE SPEEDS

High speeds and cycle rates stress the band cylinder's guidance system more than slower applications. Keeping speeds reduced will optimize the life of the actuator.

3 ENVIRONMENT: KEEP CONTAMINATION OFF BAND AND MOVING SURFACES

Contamination will decrease band cylinder service life. Service life can be improved by orienting the band and bearing system 180 degrees from the contamination source. For instance, if solid particulates are falling on the actuator, it is best to try to orient the band cylinder so that the band and bearing system are shielded from the particulates.

4 DECELERATION: DECELERATE WITH SHOCK ABSORBERS

Shock absorbers provide the most controlled and reliable deceleration at the end of stroke. Stopping in a controlled fashion will significantly decrease the inertia loads on the carrier bearings, extending cylinder life. The best location for shock absorbers is at the center of gravity of the load.

CUSHION & SHOCK ABSORBER PERFORMANCE

MXP16 (ALL BEARINGS)

MXP25 (ALL BEARINGS)

MXP32 (ALL BEARINGS)

MXP40 (ALL BEARINGS)

MXP50 (ALL BEARINGS)

MXP63 (ALL BEARINGS)

NOTE: If final (impact) velocity cannot be calculated directly, a reasonable guideline to use is 2X average velocity.

⚠ NOTE: When 2 shock absorbers are ordered, the MXP will be assembled with NO internal cushion seals.

⁴Carrier is standard MXP40P, 7.87" (200.0mm) long, Impact bolts on each end of carrier add .74" (18.8mm) to total length

⁵Carrier is standard MXP50P, 8.50" (216.0mm) long, Impact bolts on each end of carrier add .45" (11.4mm) to total length

⁶Carrier is standard MXP63P, 12.00" (304.8mm) long, Impact bolts on each end of carrier add .45" (11.4mm) to total length

NOTE: Auxiliary carrier is P-Profiled Rail carrier, see page MXP_35 for carrier size and mounting dimensions

SWITCHES

SPECIFICATIONS

MX products offer a large number of sensing choices. There are 12 switch choices: reed, solid state PNP (sourcing) or solid state NPN (sinking); in normally open or normally closed; with flying leads or quick-disconnects.

Commonly used for end-of-stroke positioning, these switches allow drop-in installation anywhere along the entire actuator length. The one-piece design includes the retained fastening hardware and is designed for any open side or bottom slot on the MX. The internal piston magnet is a standard feature, therefore these switches can be installed in the field at anytime.

Switches are used to send digital signals to PLC (programmable logic controller), TTL, CMOS circuit or other controller device. Switches contain reverse polarity protection. Solid state QD cables are shielded; shield should be terminated at flying lead end.

All switches are CE rated and are RoHS compliant. Switches feature bright red or yellow LED signal indicators; solid state switches also have green LED power indicators.

	Order Code	Part Number	Lead	Switching Logic	Power LED	Signal LED	Operating Voltage	*Power Rating (Watts)	Switching Current (mA max.)	Current Consumption	Voltage Drop	Leakage Current	Temp. Range	Shock / Vibration
REED	R Y	8100-9082	5m	SPST Normally Open	—	Red	5 - 240 AC/DC	*10.0	100mA	—	3.0 V max.	—	14 to 158°F [-10 to 70°C]	50 G / 9 G
	R K	8100-9083	Quick Disconnect											
	N Y	8100-9084	5m	SPST Normally Closed	—	Yellow	5 - 110 AC/DC							
	N K	8100-9085	Quick Disconnect											
SOLID STATE	T Y	8100-9088	5m	PNP (Sourcing) Normally Open	Green	Yellow	10 - 30 Vdc	*3.0	100mA	20 mA @ 24V	2.0 V max.	0.05 mA max.		
	T K	8100-9089	Quick Disconnect

SWITCH INSTALLATION AND REPLACEMENT

Place switch in side groove on tube at desired location with "Tolomatic" facing outward. While applying light pressure to the switch, rotate the switch is halfway into the groove. Maintaining light pressure, rotate the switch in the opposite direction until the it is fully inside the groove with "Tolomatic" visible. Re-position the switch to the exact location and lock the switch securely into place by tightening the screw on the switch.

ADJUSTMENT PROCEDURES

CUSHION NEEDLE ADJUSTMENT

Adjust the cushion needle in the cylinder heads carefully to obtain proper deceleration for your particular application. Proper cushion needle adjustment is achieved when the carrier reaches the end of travel at a velocity approaching

zero. If the carrier reaches the end of stroke at velocity, then the cushion needs to be increased by turning the cushion needle screw clockwise. If the carrier stalls or bounces (quickly oscillating directions) before it reaches the end of stroke, then the cushion needs to be decreased by turning the cushion needle screw counterclockwise. Improper cushion adjustment may cause premature failure of the actuator. Call Tolomatic with any questions.

S SOLID BEARING CARRIER ADJUSTMENT

The **S** solid bearing carrier will provide for maximum life when properly adjusted. The carrier design contains both tension and lock screws. The tension screws control the amount of pressure placed on the carrier bearings. The lock screws lock the tension screws in place and provide fine adjustment of the carrier bearings. The number of tension and lock screws will vary depending on the bore size of the actuator.

1. Fully loosen all tension and lock screws. They do not need to be removed, just fully loosened.
2. Tighten tension screws on both sides of carrier roughly 1/8 to 1/4 turn clockwise past where the screw starts to feel snug. The carrier should be very difficult or impossible to move by hand.
3. Next, adjust the lock screws on both sides of the carrier roughly 1/8 to 1/4 turn clockwise past where the screw starts to engage.
4. Ideal carrier tension is achieved when the carrier feels snug in relation to the tube. No rocking motion should be present. The carrier should be loose enough to be moved by hand over the entire length of the actuator. If after this process the carrier has become too loose, equally adjust all of the lock screws with a slight 1/32 turn counterclockwise. A carrier that is adjusted too tight will increase the breakaway pressure required for motion; in extreme cases no motion will occur when air is applied.

3. Tighten tension screws by turning them clockwise until the carrier is just tight enough so that no side-to-side rocking motion is present and it can easily be moved by hand over the entire stroke length with no hesitation. Very little torque on the screws is required to obtain this condition.

Note: The Tension Screws are the small set screw style fastener. The Lock Screws are the larger, low head, hex drive screws.

4. Tighten lock screws by turning them clockwise until tight. The carrier should feel snug in relation to the tube, with no side-to-side rocking motion present. If the carrier becomes too loose, loosen the lock screws, tighten the tension screws and then retighten the lock screws.

Allen wrench sizes for carrier adjustment, Solid bearing actuators

	Tension Screw		Lock Screw	
	in	mm	in	mm
16	1/16	2	1/16	2
25	5/32	4	1/8	3
32	5/32	4	3/32	2
40	5/32	4	1/8	3
50	3/16	4	3/32	2.5
63	1/4	5	3/16	5

6. Once ideal carrier tension is achieved, fully tighten end plate screws on both ends of the carrier.

During the service life, this process may need to be repeated. Keeping the carrier properly adjusted will prolong the life of the **S** solid bearing system.

NOTE: MXP16S requires a different carrier adjustment procedure, see below.

MXP16

Tools Required:

Inch Models: 1/16 inch and 2.5mm Hex Wrench (Key)
Metric Models: 2 and 2.5 mm Hex Wrench (Key)

1. Loosen endplate screws on both ends of the carrier.
2. Fully loosen all tension and lock screws. They do not need to be removed, just fully loosened.

BEARING

- N** Internal Bearing
- S** Solid Bearing
- P** Profiled Rail

PORTING

- TP** Metric Taper (Rc/BST), Dual-end
- GP** Metric Parallel (ISO-G/BSP), Dual-end
- NP** NPT, Dual-end
- ST** Single-end, Metric Taper
- SG** Single-end, Metric Parallel
- SN** Single-end, NPT

⚠ Single End Porting **ST SG SN** is not available for MXP16

⚠ Metric Taper Porting **TP** is not available for MXP16

STROKE LENGTH & MOUNTING TYPE

SK _____ Stroke, enter desired stroke length in **inches**

SM _____ Stroke, enter desired stroke length in **millimeters**

NOTE: Actuator mounting threads and mounting fasteners will be either inch or metric; depending on how stroke length is indicated

SK=inch mounting

SM= metric mounting

AUXILIARY CARRIER

DW _____ Auxiliary Carrier, enter center-to-center spacing desired in **inches (SK)** or **millimeters (SM)**

(Same unit of measure as stroke length is required)

⚠ **Center-to-center spacing between carriers adds to overall length of the actuator, this distance will not be subtracted from stroke length specified in the previous step**

MOUNTING

- FM** Foot Mount, enter quantity desired
- TC** Tube Clamps, enter number of pairs (Not available on MXP16)
- MP** Mounting Plate (includes T-Nuts) for MXP16 ONLY
- FL** Floating Mount

⚠ **NOTE: Floating Mount is not available with "P" Profiled Rail**

⚠ **NOTE: Shock Absorbers are not available with Floating Mount**

SWITCHES

- RY** Reed Switch (Normally Open) with 5-meter lead, & enter quantity desired
- RK** Reed Switch (Normally Open) with 5-meter lead/QD, & quantity
- NY** Reed Switch (Normally Closed) with 5-meter lead, & quantity
- NK** Reed Switch (Normally Closed) with 5-meter lead/QD, & quantity

TY Solid State Switch PNP (Normally Open) w/ 5-meter lead, & quantity

TK Solid State Switch PNP (Normally Open) w/ 5-meter lead/QD, & quantity

KY Solid State Switch NPN (Normally Open) w/ 5-meter lead, & quantity

KK Solid State Switch NPN (Normally Open) w/ 5-meter lead/QD, & quantity

PY Solid State Switch PNP (Normally Closed) w/ 5-meter lead, & quantity

PK Solid State Switch PNP (Normally Closed) w/ 5-meter lead/QD, & quantity

HY Solid State Switch NPN (Normally Closed) w/ 5-meter lead, & quantity

HK Solid State Switch NPN (Normally Closed) w/ 5-meter lead/QD, & quantity

SHOCK ABSORBER

SD Fixed Shock Hardware & enter quantity desired

SL Fixed Shock Light Duty & enter quantity desired

SH Fixed Shock Heavy Duty & enter quantity desired

AD Adjustable Shock Hardware & enter quantity desired

AL Adjustable Shock Light Duty & enter quantity desired

AH Adjustable Shock Heavy Duty & enter quantity desired

⚠ **NOTE: Adjustable Shock Absorbers reduce usable stroke length of the actuator. Please see the following pages for required stroke adder.**

Call Tolomatic to determine available options and accessories based on your application requirements.

CUSTOM, MODIFIED AND STANDARD PRODUCT SOLUTIONS

CUSTOM CAPABILITIES

Tolomatic's custom model shop can create first-piece prototypes with the industry's fastest turnaround times.

Custom Solutions are Standard Business

Hundreds of customers partner with Tolomatic to solve unique automation application challenges. We are geared to handle design requests—from our Model Shop (for fast prototypes) all the way through our ISO 9001:2000 certified

manufacturing facility. Over 33% of our total business is based on products not found in our standard catalog.

With an innovation mindset, years of solid industry experience, and fast response times, let Tolomatic help you get the job done. If you are looking for linear motion solutions—pneumatic or electromechanical—and you cannot find a catalog product, get with Tolomatic. You will experience what we mean by **Excellence in Motion.**

MATERIAL HANDLING

Conveying machinery with built-in lane diverters offer a compact footprint with optimal performance.

Customer Challenge:

The traditional method of using tie rod cylinders to operate diverters required too much space to fit in space-restrictive production areas.

Tolomatic Solution:

Tolomatic recommended a series of pneumatic rodless band cylinders that could be easily retrofitted into production lines by offering a variety of mounting options.

The manufacturer's customers were pleased with the space saving results and durability of the machines. The result was an increase of repeat customers for the manufacturer.

PACKAGING

Modular bagging system fills and seals a wide range of materials and bag sizes.

Customer Challenge:

A leader in packaging technology was faced with the problem of compensating for inconsistent bag dimensions on its modular bag filling and sealing system. Irregularly sized bags required manual setup and were slowing the production process which required high-speed accuracy and flexibility.

Tolomatic Solution:

Tolomatic supplied a series of customized electric screw drive actuators that precisely positioned the incoming bags before insertion into the filling/sealing line. Two actuators adjust the vertical position and two others center the bags in the tray. The results: variations in bag lengths and widths are automatically compensated for eliminating filling, sealing and leakage problems and increasing production.

The best motion control and linear motion solutions for your applications.

BC2 BAND CYLINDER

ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

FORMED STEEL PISTON BRACKET

- Provides maximum strength at major stress points
- Heat treated carbon steel withstands the toughest dynamic forces
- Strongest bracket design in the industry assures long life with less maintenance

STAINLESS STEEL SEALING BAND SYSTEM

- Fatigue resistant stainless steel bands are specifically made to provide longer life and will not elongate, like elastomers
- Outer band keeps out contaminants for extended performance
- Inner band provides a smooth surface for less seal wear

FORMED END CAP WIPER SEAL

- Keeps contaminants from entering the sealing area
- Protects internal components
- Reduces maintenance while increasing productivity

ADJUSTABLE CUSHIONS

- Adjustable cushions are standard, not optional
- Easy screw adjustment for end-of-stroke deceleration
- Protects actuator and load from damage

TOLOMATIC... THE RODLESS CYLINDER LEADER

3-PORTED HEADS

- Standard feature
- Simplifies air connections

RIGID BLACK-ANODIZED EXTRUDED ALUMINUM TUBE

- Stronger, stiffer tube retains tolerance specs when chamber is pressurized
- Keeps sealing band in place for maximized air efficiency
- Tube supports are minimized
- Solid structural support provides durability and long life performance

ADJUSTABLE CARRIER BRACKET

- 2-bolt adjustment instead of a series of set screws
- Easy to set tension for freer running or stiffer systems
- Minimizes free play while maintaining a higher level of load guidance

LOAD-BEARING CARRIER DESIGN

- Load and piston are independent - piston floats, resulting in less friction and longer seal life
- Engineered resin load bearings offer consistently low friction and long wear

OPTIONS

AUXILIARY CARRIER

- Substantially higher load capacity
- Substantially higher bending moment capacity

FLOATING MOUNT

- Compensates for non-parallelism between band cylinder and externally guided load

TUBE SUPPORT MOUNTS

- Used for intermediate support

FOOT MOUNTS

- For end mounting of band cylinder

SHOCK ABSORBERS

- Smooth deceleration
- Allows increased operating speed
- Self-compensates for load or speed changes
- Minimizes impact load to equipment
- Higher equipment productivity
- Adjustable position shocks available

SWITCHES

- Available in Reed, Hall-effect and Triac
- 15ft. cable with flying leads; available with quick-disconnect couplers

GUIDELINES

BC2 CARRIER BRACKET BOLT ADJUSTMENT

BC2 carrier bracket adjustment bolts should be adjusted to suit each individual application, depending on the degree of rigidity required. A good starting point is to tighten the nut on the bolt until there is no lateral movement of the bolt. Then, equally tighten each nut on the carrier bolt while moving the carrier by hand along the length of the stroke. When all lateral play in the carrier is eliminated and free movement along the length of the stroke is maintained, your carrier bracket is adjusted properly. Some applications may require fine tuning of this adjustment to gain more lateral play or a higher degree of rigidity. In demanding applications, carrier adjustments should be done periodically.

BC2 Auxiliary Carrier - 10, 12, 15, 20, 25 Sizes

PERFORMANCE

The auxiliary carrier option substantially increases load carrying and bending moments capacity over the standard single carrier models. As a general rule, the auxiliary carrier option is highly recommended in vertical applications (M_y) if the distance from the carrier mounting surface to the load center of gravity (CG) exceeds the overall length of the carrier. Auxiliary carriers can be ordered with (DW) or without (DO) an internal piston. (Auxiliary carriers without a piston have no cushion on the cylinder end closest to the auxiliary carrier.)

NOTE: breakaway pressure will increase when using auxiliary carrier.

BENDING MOMENTS

MOMENT LOAD vs. DISTANCE

Rates were calculated with the following assumptions:

- 1.) Coupling between carriers is rigid.
- 2.) Load is equally distributed between carriers.
- 3.) Coupling device applies no misalignment loads to carriers.

	BORE SIZE		"D" MINIMUM *				MAX. BENDING MOMENT						MAX. LOAD

ASSEMBLY INFORMATION

IMPORTANT INFORMATION REGARDING AUXILIARY CARRIER PLACEMENT

When a BC2 cylinder is ordered with auxiliary carrier, it is always placed to the right (while facing the switch mounted or open port side) of the main carrier. This is for auxiliary carriers with (DW)/or without (DO) piston and for units with/ or without shock absorbers. When the auxiliary carrier is ordered without (DO) piston the carrier without piston will be marked.

ORDERING INFORMATION

When ordering, determine the minimum distance required between carriers (dimension "D" in Auxiliary Carrier Bending Moments chart).

Determine your working stroke and your "D" dimension, then enter these into your configuration string. (Example: BC215SK50.00DW15.00RT2) The configurator will calculate the overall length of the actuator.

BC2 Tube Supports - ALL Sizes

Tube supports are mounted to the BC2 band cylinder during assembly procedure. Made of black-anodized aluminum, tube supports are designed to fit into dovetail grooves which run the length of the cylinder tube. Refer to the tube support graph to determine the number of tube supports required.

NOTE: Switches cannot be mounted on the same face of the actuator as tube supports.

BC2 Floating Mount Bracket - ALL Sizes

FLOATING MOUNT BRACKET

ORDER CODE

FL

For applications where a BC2 band cylinder is moving a load that is externally guided and supported. An externally guided load, not parallel to the BC2 band cylinder may result in cylinder binding. The floating mount bracket compensates for nonparallelism between the cylinder and the external guide.

⊗ (Floating mount brackets are not to be used in conjunction with shock absorbers)

BC2 Switches - ALL Sizes

SWITCHES

There are 10 sensing choices: DC reed, form A (open) or form C (open or closed); AC reed (Triac, open); Hall-effect, sourcing, PNP (open); Hall-effect, sinking, NPN (open); each with either flying leads or QD (quick disconnect). Commonly used to send analog signals to PLC (programmable logic controllers), TLL, CMOS circuit or other controller device. These switches are activated by the actuator's magnet.

Switches contain reverse polarity protection. QD cables are shielded; shield should be terminated at flying lead end.

If necessary to remove factory installed switches, be sure to reinstall on the same side of actuator with scored face of switch toward internal magnet.

BC2 Shock Absorbers - 10, 12, 15, 20, 25 Sizes

Rodless cylinders with standard internal cushion offer an effective method of decelerating loads. However, all Tolomatic rodless cylinders are capable of carrying heavier loads at higher velocities than the cylinder cushion can absorb. Optional shock absorbers can be used to increase the cylinder's life and broaden the application range for the cylinder model you have chosen.

Tolomatic offers two types of shock absorber options for use with rodless cylinders. Standard shock absorbers, which are positioned on the cylinder heads for end-of-stroke deceleration and adjustable shock absorbers which allows the shock to be positioned at any point along the cylinder.

Typical shock absorber life varies between 1-2 million cycles (depending on environment) appropriate preventative maintenance should be considered in high cyclic applications.

NOTE: When 2 shock absorbers are ordered, the unit will be assembled with NO internal cushions.

NOTE: Adjustable shock absorbers will reduce stroke length. To maintain desired stroke length: when ordering increase stroke length by the dimension in the table below for each adjustable shock absorber ordered.

10	12	15	20	25
0.75" [19.0mm]	0.03" [0.7mm]	0.35" [8.9mm]	0.85" [21.6mm]	0.85" [21.6mm]

CAUTION: In applications which result in a load bending moment at deceleration, care should be taken to decelerate the load rather than the carrier of the band cylinder.

DIMENSIONS

Rodless Cylinder Selection Guidelines - BC2, BC3, BC4, LS - All Sizes

PROVIDING LOAD GUIDANCE AND SUPPORT

The process of selecting a load bearing actuator for a given application can be complex. It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application. The following overview of the selection guidelines are for educational purposes only.

1 COMPILE APPLICATION REQUIREMENTS

To determine the appropriate Band Cylinder or Linear Slide model for an application, compile the following information:

- Available pressure (PSI)
- Weight of load (lbs or kg)
- Orientation of load (lbs or kgs)
- Velocity of load (in/sec or mm/sec)
- Stroke length (in or mm)

HINT: Use Tolomatic sizing and selection software, download at: tolomatic.com

2 SELECT CYLINDER SIZE

- Consult the Theoretical Force vs. Pressure charts.
- Cross-reference the load force (or load weight if force is not known) and the available operating pressure. If the intersection falls below the diagonal line, and if moments do not exceed maximum values listed for that model (see Step 3), the actuator will accommodate the application.

If the intersection is above the diagonal line, a larger cylinder bore size should be considered.

NOTE: Additional force may be required to obtain the necessary acceleration for vertical or horizontal loads.

3 DETERMINE NATURE OF LOAD AND THE EFFECT OF BENDING MOMENTS

If the cylinder will guide and support a load located directly over the center of carrier, bending moments will not be a factor in the cylinder selection.

NOTE: The maximum load "L" must not exceed the capacity limits of the cylinder selected.

- Bending Moments

For off center or side loads, determine the distance from the center of mass of the load to the center of the carrier bracket. This measurement is needed to calculate the torque for bending moments. (Refer to Bending Moment chart for each model.)

Should the resulting maximum bending moment exceed figures indicated on the chart, external guides, auxiliary carrier/s or a larger cylinder should be considered.

- Auxiliary Carrier Bending Moments

The auxiliary carrier option (available on most models) increases load carrying capacity and bending moments. Auxiliary carriers can be ordered with or without an internal piston. (Auxiliary

carriers without a piston have no internal cushion on the cylinder end closest to the auxiliary carrier.)

IMPORTANT: When ordering, determine the working stroke, then the minimum distance required between carriers (dimension "D" in Auxiliary Carrier Bending Moments chart). When ordered, Tolomatic's configurator will calculate the overall length of the actuator.

NOTE: breakaway pressure will increase when using auxiliary carriers.

4 DETERMINE INTERNAL CUSHION CAPACITY

- Consult the Cushion Data chart for the model selected. The velocities listed on the cushion charts are final or cushion impact velocities. On applications where the internal cushions or bumpers are to be used, be sure the actual, final or impact velocity is known. If the velocity is not known, use of limit switches with valve deceleration circuits or shock absorbers should be considered. NOTE: The BC205 uses external bumpers in place of internal cushions, LS05 & LS10 do not have cushions or bumpers.
- Cross-reference the final velocity and weight of the load. If the intersection is below the diagonal lines, the internal cushions on the actuator may be used. If the point falls above the dashed diagonal line or if the velocity is not known, use deceleration circuits, external shock absorbers or select a

larger cylinder with greater cushion capacity. On high-cyclic applications, use of external stops is strongly recommended.

5 DETERMINE TUBE SUPPORT REQUIREMENTS

- Consult the Tube Support chart for the model selected.
- Cross reference the load weight and maximum distance between supports.

6 CONSIDER OPTIONS

- Switches— dc Reed, Hall-effect or ac Triac

Band Cylinders and Linear Slides each have different standard features and options. Check the options section for the actuator you have selected.

- Shock Absorbers— if needed.
- Foot Mounting Kits
- Floating Mount Bracket – use when lack of parallelism occurs between the cylinder and an external guided and supported load.
- Single End Porting (BC3, BC4)
- Long Carrier (BC4)
- Proximity Sensors (LS)
- Dual 180° Carrier (BC3)

Application Guidelines

The following conditional statements are intended as general guidelines for use of Tolomatic actuators. Since all applications have their own specific operating requirements, consult Tolomatic, Inc. or your local Tolomatic distributor if an application is unconventional or if questions arise regarding the selection process.

CUSHION NEEDLE ADJUSTMENT (BC2, BC3, BC4, CC, SA, DP, TC ONLY)

Adjust the cushion needles in the cylinder heads carefully to obtain a smooth, hesitation free deceleration for your particular application. If there are questions on proper adjustment, please consult Tolomatic, Inc.

LUBRICATION GUIDELINES

All Tolomatic actuators (except Cable Cylinders) are prelubricated at the factory. To ensure maximum actuator life, the following guidelines should be followed.

• Filtration

We recommend the use of dry, filtered air in our products. "Filtered air" means a level of 10 Micron or less. "Dry" means air should be free of appreciable amounts of moisture. Regular maintenance of installed

filters will generally keep excess moisture in check.

• External Lubricators (optional)

The factory prelubrication of Tolomatic actuators will provide optimal performance without the use of external lubrication. However, external lubricators can further extend service life of pneumatic actuators if the supply is kept constant.

Oil lubricators, (mist or drop) should supply a minimum of 1 drop per 20 standard cubic feet per minute to the

cylinder. As a rule of thumb, double that rate if water in the system is suspected. Demanding conditions may require more lubricant.

If lubricators are used, we recommend a non-detergent, 20cP @ 140°F 10-weight lubricant. Optimum conditions for standard cylinder operation are +32° to +150°F (+0° to 65.5°C).

 NOTE: Use of external lubricators may wash away the factory installed lubrication. External lubricants must be maintained in a constant supply or the results will be a dry actuator prone to premature wear.

• Sanitary Environments

Oil mist lubricators must dispense "Food Grade" lubricants to the air supply. Use fluids with ORAL LD50 toxicity ratings of 35 or higher such as Multitherm® PG-1 or equivalent. Demanding conditions can require a review of the application.

FINAL VELOCITY CALCULATION

Velocity calculations for all rodless cylinders need to differentiate between final velocity and average velocity. For example: Stroking a 100-inch BC3 model in one second yields an average velocity of 100 inches per second. To properly determine the inertial forces for cushioning, it is important to know the

final (or impact) velocity. Rodless cylinders accelerate and decelerate at each end of the stroke. Therefore this acceleration must be considered (see diagram).

If final (or impact) velocity cannot be calculated directly, a reasonable guideline is to use 2 x average velocity.

Switch Ordering NOTES:

To order field retrofit switch and hardware kits for all Tolomatic actuators: SW (Then the model and bore size, and type of switch required)

Example: SWBC215RT

(Hardware and Form A Reed switch with 5 meter lead for 1.5" bore BC2 band cylinder)

⚠ Mounting hardware is required if replacing switch for any actuator manufactured before 7/1/97

Service Parts Ordering NOTES:

- Foot Mount Kit contains two foot mount brackets and mounting hardware
- Shock Field Retrofit Kit contains one Shock Absorber and mounting hardware
- Shock Field Mount Kit contains one set of mounting hardware only
- A minimum of 2 (two) Tube Supports required per cylinder
- Repair Kit for 05 size contains O-rings, U-Cups, End Caps, Wear Strips, Band Inserts, Spring Clamps, Sealing Band, Dust Band and Shock Absorbing Pads
- Repair Kit for 10, 12, 15, 20 & 25 size contains End Caps, Bearing Rods, O-rings, U-cups, Wear Rings, Cushion Seals, Band Inserts, Spring Clamps, Sealing Band and Dust Band.
- When ordering repair kits, specify stroke as "SK" then indicate the desired length in decimal inches after the order code indicated above. EXAMPLE: RKBC210SK10.00
- Standard end-of-stroke shock absorbers are designed to operate without the assistance of the standard band cylinder cushion. To ensure proper shock absorber performance, make sure the air cushion is disabled.

BC3 Recirculating Ball Bearing Rodless Cylinder

THE RODLESS ADVANTAGE

TOLOMATIC RODLESS BAND CYLINDERS GET THE JOB DONE IN LESS SPACE THAN ROD STYLE CYLINDERS

Consider this: A rodless band cylinder contains its stroke within the cylinder itself. A 2" bore cylinder with a 24" stroke can provide a 43% space savings when compared to an equivalently sized tie rod cylinder. In addition, the load is supported throughout the entire stroke so there is minimal bearing wear and load deflection when compared to rod style cylinders.

With a Tolomatic Band Cylinder, there is no concern about rod rotation. Because rodless cylinders have equal piston areas in both directions, the cylinder experiences zero load variation in either direction.

Go rodless and save space!

ROD STYLE vs RODLESS FEATURE COMPARISON

● INNOVATIVE RODLESS PRODUCTS

Tolomatic created the rodless cylinder industry when it manufactured the original cable cylinder. We continually add innovative products to our portfolio, offering industry leading pneumatic rodless products. For over 50 years, Tolomatic has been recognized as the rodless cylinder world market leader, and with good reason.

● ENDURANCE TECHNOLOGYSM

Every Tolomatic pneumatic band cylinder is designed and built with Endurance TechnologySM. Material selection, from seals to finish, and every other design element is optimized for long life and excellent performance. The result is the best value and best performing rodless cylinder on the market today. As one customer recently told us, "Your cylinders are built like a tank and run like a deer." Thank you!

● TRUST YOUR APPLICATION TO THE RODLESS LEADER

When you want the job done right, go with the experts. Long life. Durability. Ruggedness. Built to your specifications in 5 days or less. Only one company specializes in rodless technology. Tolomatic. Endurance TechnologySM. The rodless leader.

Be sure to visit www.tolomatic.com for up-to-date product specifications, free sizing and selection software, and 3D CAD solid files.

FORMED END CAP WIPER SEAL

- Keeps contaminants from entering the sealing area
- Protects internal components
- Reduces maintenance while increasing productivity

SEALED BALL BEARING SYSTEM

- All bearing components covered by seal strip
- Bearing components are sealed and lubricated at the factory
- Assures maximum resistance to contamination

STAINLESS STEEL SEALING BAND SYSTEM

- Fatigue resistant stainless steel bands are specifically made to provide longer life and will not elongate, like elastomers
- Outer band keeps out contaminants for extended performance
- Inner band provides a smooth surface for less seal wear

FORMED STEEL PISTON BRACKET

- Provides maximum strength at major stress points
- Heat treated carbon steel withstands the toughest dynamic forces
- Strongest bracket design in the industry assures long life with less maintenance

TOLOMATIC... THE RODLESS CYLINDER LEADER

LOAD-BEARING CARRIER DESIGN

- Load and piston are independent - piston floats, resulting in less friction and longer seal life
- Recirculating ball bearing system guides and supports load for consistent long term performance
- Constant level of friction is maintained even when load orientation changes

ADJUSTABLE CUSHIONS

- Adjustable cushions are standard, not optional
- Easy screw adjustment for end-of-stroke deceleration
- Protects actuator and load from damage

PATENTED WEDGE BEARING SYSTEM

- Bearing surfaces adjusted at the factory for optimum pre-load
- Bearing surfaces adjusted by and supported by a steel wedge assuring long term stability

OPTIONS

AUXILIARY CARRIER

- Substantially higher load capacity
- Substantially higher bending moment capacity

TUBE SUPPORT MOUNTS

- Used for intermediate support

FOOT MOUNTS

- For end mounting of band cylinder

SHOCK ABSORBERS

- Smooth deceleration, higher productivity
- Allows increased operating speed
- Self-compensates for load or speed changes
- Minimizes impact load to equipment
- Adjustable position shocks available

SWITCHES

- Available in Reed, Hall-effect and Triac
- 15ft. cable with flying leads; available with quick-disconnect couplers

For intermediate support, tube support brackets can be mounted to the BC3 model. Made of black-anodized aluminum, the brackets are attached to the bottom and sides of the cylinder tube with rail nuts. The number of tube support brackets required and their placement depends on the overall length of the BC3 model and the load weight being moved and supported. Refer to the tube support data chart below. Note: Switches cannot be mounted on the same face of the actuator as tube supports.

DUAL 180° CARRIER

The Dual 180° Carrier option may be used when load factors exceed those of a single carrier actuator. This option allows the load to be rotated 90° from the cylinder's carrier providing an additional load bearing mounting surface.

NOTE: The Dual 180° Carrier option requires its own proprietary tube supports and foot mounts. See dimensional information below. Breakaway pressure will increase when using the Dual 180° Carrier option.

ENGR

AUXILIARY CARRIER

The auxiliary carrier option substantially increases load carrying capacity and bending moments. Auxiliary carriers can only be ordered with an internal piston. When ordering, determine the minimum distance required between carriers (dimension "D" in Auxiliary Carrier Bending Moments chart below). Determine

ORDERING PROCEDURE your working stroke. Enter these into your configuration string. (Example BC315SK50.00DW10.00) the configurator will calculate the overall length of the actuator.

NOTE: Breakaway pressure will increase when using auxiliary carriers.

AUXILIARY CARRIER BENDING MOMENTS

LOAD vs. DISTANCE BC3 SERIES

- Rates were calculated with the following assumptions:
- 1.) Coupling between carriers is rigid.
 - 2.) Load is equally distributed between carriers.
 - 3.) Coupling device applies no misalignment loads to carriers.

MODEL NO.	"D" MIN.	MAXIMUM BENDING MOMENT			MAXIMUM LOAD	
		M _{YA} **	M _{XA}	M _{ZA} **	F _{ZA}	F _{YA}

BC3 SINGLE END PORTING - All Sizes

SINGLE END PORTING

The BC3 is uniquely designed for multiple port locations including single end porting. This is a standard feature on all bore sizes of the BC3. The lower ports on the head assembly only function when used to cross port the cylinder for single end porting.

To convert to single end porting, remove access pipe plug fitting from the opposite head assembly that the air lines will be installed into. Then remove the internal port pipe plug. Reinstall access pipe plug into the bottom of the head. Remove pipe plug from the head that the air lines will be installed.

AIR FLOW DIAGRAMS

SINGLE END PORTING ALLOWS THE GREATEST FLEXIBILITY IN AIR HOOK UP

Converting from Standard porting to Left or Right side porting can be achieved if plugs are placed as in the diagram below.

Diagrams shown for BC315 and BC320

Note: Standard porting may be field converted to ported from left or ported from right. For complete instructions refer to parts sheet.

BC3 SWITCHES - All Sizes

SWITCHES

There are 10 sensing choices: DC reed, form A (open) or form C (open or closed); AC reed (Triac, open); Hall-effect, sourcing, PNP (open); Hall-effect, sinking, NPN (open); each with either flying leads or QD (quick disconnect). Commonly used to send analog signals to PLC (programmable logic controllers), TLL, CMOS circuit or other controller device. These switches are activated by the actuator's magnet.

Switches contain reverse polarity protection. QD cables are shielded; shield should be terminated at flying lead end.

If necessary to remove factory installed switches, be sure to reinstall on the same side of actuator with scored face of switch toward internal magnet.

BC3 SHOCK ABSORBERS - All Sizes

SHOCK ABSORBERS

ORDER CODE

AD_ or AH_ or AL_
 (_ = Number ordered)

Rodless cylinders with standard internal cushion offer an effective method of decelerating loads. However, all Tolomatic rodless cylinders are capable of carrying heavier loads at higher velocities than the cylinder cushion can absorb. Optional shock absorbers can be used to increase the cylinder's life and broaden the application range for the cylinder model you have chosen.

Tolomatic offers adjustable shock absorbers for the BC3. They allow the shock to be positioned at any point along the cylinder.

A shock stop plate must be used in conjunction with the BC3 shock to provide a stopping surface on the carrier.

Typical shock absorber life varies between 1-2 million cycles (depending on environment) appropriate preventative maintenance should be considered in high cyclic applications.

NOTE: When 2 shock absorbers are ordered, the unit will be assembled with NO internal cushions.

CAUTION: In applications which result in a load bending moment at deceleration, care should be taken to decelerate the load rather than the carrier of the band cylinder.

DIMENSIONS

***NOTE:** Shock Absorber option will increase the overall carrier height "M".

Rodless Cylinder Selection Guidelines - BC2, BC3, BC4, LS - All Sizes

PROVIDING LOAD GUIDANCE AND SUPPORT

The process of selecting a load bearing actuator for a given application can be complex. It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application. The following overview of the selection guidelines are for educational purposes only.

1 COMPILE APPLICATION REQUIREMENTS

To determine the appropriate Band Cylinder or Linear Slide model for an application, compile the following information:

- Available pressure (PSI)
- Weight of load (lbs or kg)
- Orientation of load (lbs or kgs)
- Velocity of load (in/sec or mm/sec)
- Stroke length (in or mm)

HINT: Use Tolomatic sizing and selection software, download at: tolomatic.com

2 SELECT CYLINDER SIZE

- Consult the Theoretical Force vs. Pressure charts.
- Cross-reference the load force (or load weight if force is not known) and the available operating pressure. If the intersection falls below the diagonal line, and if moments do not exceed maximum values listed for that model (see Step 3), the actuator will accommodate the application.

If the intersection is above the diagonal line, a larger cylinder bore size should be considered.

NOTE: Additional force may be required to obtain the necessary acceleration for vertical or horizontal loads.

3 DETERMINE NATURE OF LOAD AND THE EFFECT OF BENDING MOMENTS

If the cylinder will guide and support a load located directly over the center of carrier, bending moments will not be a factor in the cylinder selection.

NOTE: The maximum load "L" must not exceed the capacity limits of the cylinder selected.

- Bending Moments

For off center or side loads, determine the distance from the center of mass of the load to the center of the carrier bracket. This measurement is needed to calculate the torque for bending moments. (Refer to Bending Moment chart for each model.)

Should the resulting maximum bending moment exceed figures indicated on the chart, external guides, auxiliary carrier/s or a larger cylinder should be considered.

- Auxiliary Carrier Bending Moments

The auxiliary carrier option (available on most models) increases load carrying capacity and bending moments. Auxiliary carriers can be ordered with or without an internal piston. (Auxiliary

carriers without a piston have no internal cushion on the cylinder end closest to the auxiliary carrier.)

IMPORTANT: When ordering, determine the working stroke, then the minimum distance required between carriers (dimension "D" in Auxiliary Carrier Bending Moments chart). When ordered, Tolomatic's configurator will calculate the overall length of the actuator.

NOTE: breakaway pressure will increase when using auxiliary carriers.

4 DETERMINE INTERNAL CUSHION CAPACITY

- Consult the Cushion Data chart for the model selected. The velocities listed on the cushion charts are final or cushion impact velocities. On applications where the internal cushions or bumpers are to be used, be sure the actual, final or impact velocity is known. If the velocity is not known, use of limit switches with valve deceleration circuits or shock absorbers should be considered. NOTE: The BC205 uses external bumpers in place of internal cushions, LS05 & LS10 do not have cushions or bumpers.
- Cross-reference the final velocity and weight of the load. If the intersection is below the diagonal lines, the internal cushions on the actuator may be used. If the point falls above the dashed diagonal line or if the velocity is not known, use deceleration circuits, external shock absorbers or select a

larger cylinder with greater cushion capacity. On high-cyclic applications, use of external stops is strongly recommended.

5 DETERMINE TUBE SUPPORT REQUIREMENTS

- Consult the Tube Support chart for the model selected.
- Cross reference the load weight and maximum distance between supports.

6 CONSIDER OPTIONS

- Switches— dc Reed, Hall-effect or ac Triac

Band Cylinders and Linear Slides each have different standard features and options. Check the options section for the actuator you have selected.

- Shock Absorbers— if needed.
- Foot Mounting Kits
- Floating Mount Bracket – use when lack of parallelism occurs between the cylinder and an external guided and supported load.
- Single End Porting (BC3, BC4)
- Long Carrier (BC4)
- Proximity Sensors (LS)
- Dual 180° Carrier (BC3)

Application Guidelines

The following conditional statements are intended as general guidelines for use of Tolomatic actuators. Since all applications have their own specific operating requirements, consult Tolomatic, Inc. or your local Tolomatic distributor if an application is unconventional or if questions arise regarding the selection process.

CUSHION NEEDLE ADJUSTMENT (BC2, BC3, BC4, CC, SA, DP, TC ONLY)

Adjust the cushion needles in the cylinder heads carefully to obtain a smooth, hesitation free deceleration for your particular application. If there are questions on proper adjustment, please consult Tolomatic, Inc.

LUBRICATION GUIDELINES

All Tolomatic actuators (except Cable Cylinders) are prelubricated at the factory. To ensure maximum actuator life, the following guidelines should be followed.

• Filtration

We recommend the use of dry, filtered air in our products. "Filtered air" means a level of 10 Micron or less. "Dry" means air should be free of appreciable amounts of moisture. Regular maintenance of installed

filters will generally keep excess moisture in check.

• External Lubricators (optional)

The factory prelubrication of Tolomatic actuators will provide optimal performance without the use of external lubrication. However, external lubricators can further extend service life of pneumatic actuators if the supply is kept constant.

Oil lubricators, (mist or drop) should supply a minimum of 1 drop per 20 standard cubic feet per minute to the

cylinder. As a rule of thumb, double that rate if water in the system is suspected. Demanding conditions may require more lubricant.

If lubricators are used, we recommend a non-detergent, 20cP @ 140°F 10-weight lubricant. Optimum conditions for standard cylinder operation are +32° to +150°F (+0° to 65.5°C).

 NOTE: Use of external lubricators may wash away the factory installed lubrication. External lubricants must be maintained in a constant supply or the results will be a dry actuator prone to premature wear.

• Sanitary Environments

Oil mist lubricators must dispense "Food Grade" lubricants to the air supply. Use fluids with ORAL LD50 toxicity ratings of 35 or higher such as Multitherm® PG-1 or equivalent. Demanding conditions can require a review of the application.

FINAL VELOCITY CALCULATION

Velocity calculations for all rodless cylinders need to differentiate between final velocity and average velocity. For example: Stroking a 100-inch BC3 model in one second yields an average velocity of 100 inches per second. To properly determine the inertial forces for cushioning, it is important to know the

final (or impact) velocity. Rodless cylinders accelerate and decelerate at each end of the stroke. Therefore this acceleration must be considered (see diagram).

If final (or impact) velocity cannot be calculated directly, a reasonable guideline is to use 2 x average velocity.

BC3 APPLICATION GUIDELINES

BC3 DECELERATION CONSIDERATIONS

While the BC3 is capable of carrying very large loads, consideration must be given to how to stop the load at the end of stroke. If Tolomatic cushions or shocks are to be used, please stay within the specifications on page BC3_22. If you should decide to utilize another type of shock absorber, be sure that the deceleration of the load is smooth and over adequate distance.

CAUTION: In applications which result in a load bending moment at deceleration, care should be taken to decelerate the load rather than the carrier of the band cylinder.

BC3 BEARING LUBRICATION

The bearing system for the BC3 is prelubricated at the factory with a high quality No. 2 lithium-soap base grease. Relubrication is recommended every 10 million linear feet using a lithium-soap base grease for optimal bearing performance. To relubricate, lift back upper sealing band and apply grease directly to the stationary ball ways. Applications that are exposed to moisture or dirt, may require more frequent relubrication.

The following example illustrates this:

Upon hitting the shock absorber, a load of 10 lbs. is travelling at a final velocity of 80 inches/second. It must be brought to rest over the shock absorber stroke of 0.50 inches. To determine the Mz and g forces on the carrier at this point:

Mz = moment about z-axis V = velocity (final) a = deceleration rate
 g = 386.4 in./sec.² (standard gravity) s = shock stroke

$$a = \frac{v_f^2}{2s} = \frac{(80 \text{ in./sec.})^2}{2 \times 0.50 \text{ in.}} = 6400 \text{ in./sec.}^2 \text{ (Deceleration Rate)}$$

$$\text{force equivalent} = \frac{a}{g} \times L = \frac{6400 \text{ in./sec.}^2}{386.4 \text{ in./sec.}^2} \times 10 \text{ lbs.} = 165.6 \text{ lbs.}$$

Therefore the Mz created during stopping is:

$$Mz = (\text{force eq.}) \times dy = 165.6 \text{ lbs.} \times 12 \text{ in.} = 1987.2 \text{ in.-lbs.}$$

Although an Mz = 1992 is over our catalog ratings, this is acceptable during stopping of the load, if it is less than three (3) times the catalog rated moment load. However, **moment values should never exceed 3 times catalog ratings** during stopping. If this cannot be accomplished, then a deceleration circuit should be utilized.

2503-1025	Connector (Female) 5 meter lead		

NOTE: When ordered by Config. Code Female connector & all mounting hardware is included

Switch Ordering NOTES:

To order field retrofit switch and hardware kits for all Tolomatic actuators: SW (Then the model and bore size, and type of switch required)

Example: SWBC315RT

(Hardware and Form A Reed switch with 5 meter lead for 1.5" bore BC3 band cylinder)

⚠ Mounting hardware is required if replacing switch for any actuator manufactured before 7/1/97

Service Parts Ordering NOTES:

- 1 Foot Mount Kit contains one bracket and mounting hardware.
- 2 Shock Field Retrofit Kit contains one shock absorber and mounting hardware.
- 3 Shock Field Mount Kit contains one set of mounting hardware.
- 4 Shock Stop Plate Kit contains shock plate, impact bolts, screws and dowel pins.
- 5 Contains one tube support and mounting hardware.
- 6 Repair Kit contains external dust band, internal seal band, wipers, end caps and internal soft seals. Stroke length must be indicated after repair kit code.

LOAD-SUPPORTING BEARING DESIGN

• Self-lubricating bearing runs the length of carrier web for maximum bearing surface, this patented floating bearing system provides smooth movement and maximum transverse load resistance

- Durable, engineered resin piston has 50% greater bearing area
- Thicker and longer web has 60% greater material for increased robustness
- Maximum bearing life for millions of cycles

STAINLESS STEEL SEALING BAND SYSTEM

- Fatigue resistant stainless steel bands are specifically made to provide longer life and will not elongate, like elastomers
- Outer band keeps out contaminants for extended performance
- Inner band provides a smooth surface for less seal wear

FORMED END CAP WIPER SEAL

- Keeps contaminants from entering the sealing area
- Protects internal components
- Reduces maintenance while increasing productivity

TOLOMATIC... THE RODLESS CYLINDER LEADER

RIGID CLEAR-ANODIZED EXTRUDED ALUMINUM TUBE

- Stronger, stiffer tube retains tolerance specifications when chamber is pressurized
- Keeps sealing band in place for maximized air efficiency
- Tube supports are minimized
- Solid structural support provides durability and long life performance

ADJUSTABLE CUSHIONS

- Adjustable cushions are standard, not optional
- Easy screw adjustment for end-of-stroke deceleration
- Protects actuator and load from damage

OPTIONS

AUXILIARY CARRIER

- Substantially higher load capacity
- Substantially higher bending moment capacity

LONG CARRIER

- Substantially higher My and Mz bending moment capacity
- Larger load bearing mounting surface

FLOATING MOUNT

- Compensates for non-parallelism between band cylinder and externally guided load

TUBE SUPPORT MOUNTS

- Used for intermediate support

FOOT MOUNTS

- For end mounting of band cylinder

SHOCK ABSORBERS

- Smooth deceleration, higher productivity
- Allows increased operating speed
- Self-compensates for load or speed changes
- Minimizes impact load to equipment
- Adjustable position shocks available

SINGLE END PORTING

- Simplifies air connections

SWITCHES

- Available in Reed, Hall-effect and Triac
- 15ft. cable with flying leads; available with quick-disconnect couplers

BC4 Single End Porting - 10, 12, 15, 20, 25 Sizes

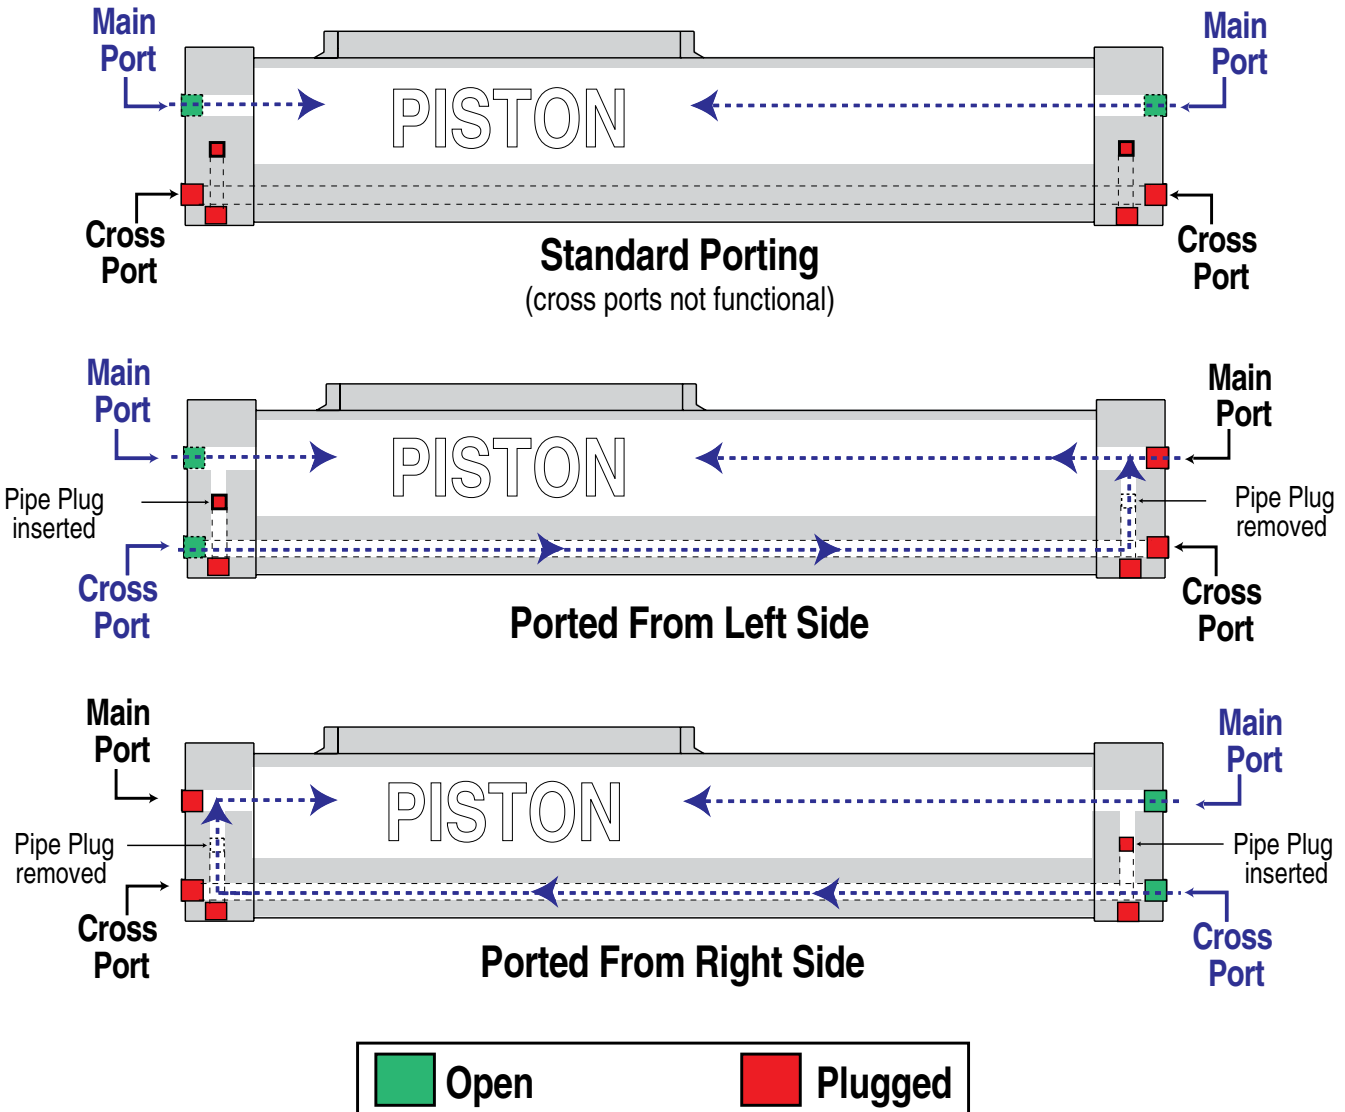

SINGLE END PORTING ALLOWS THE GREATEST FLEXIBILITY IN AIR HOOK UP.

This option allows you to run air lines to just one end of the BC4, simplifying air hook up. The Single End Porting option for the BC410 is factory installed on the right side.

⊗ Not available for 06 (5/8" bore).

AIR FLOW DIAGRAMS

 NOTE: Standard porting may be field converted to ported from left or ported from right. For complete instructions refer to parts sheet.

BC4 Long Carrier - 06, 10, 12, 15 Sizes

Long carrier option greatly increases the “My” and “Mz” moment load capacity. This broadens the application range for these models. Other benefits include larger mounting surface and virtual elimination of chatter for vertical cantilever loads.

⊗ Not available for 20, 25 (2" & 2.5" bore).

AUXILIARY CARRIER

ORDER CODE
DW
(Auxiliary Carrier with piston)

The auxiliary carrier option substantially increases load carrying and bending moments capacity over the standard single carrier models. As a general rule, the auxiliary carrier option is highly recommended in vertical applications (My) if the distance from the carrier mounting surface to the load center of gravity (CG) exceeds the overall length of the carrier. For the BC4 auxiliary carriers can only be ordered with "DW" an internal piston. (BC2 & BC3 auxiliary carriers may be ordered "DO" without a piston.)

NOTE: breakaway pressure will increase when using auxiliary carrier.

ORDERING INFORMATION

When ordering, determine the minimum distance required between carriers (dimension "D" in Auxiliary Carrier Bending Moments chart).

Determine your working stroke and your "D" dimension, then enter these into your configuration string. (Example: BC415SK50.00DW15.00RT2) The configurator will calculate the overall length of the actuator.

DIMENSIONS

	BORE SIZE		BB		CC		"D" MINIMUM (with Piston)

BC4 Tube Supports - ALL Sizes

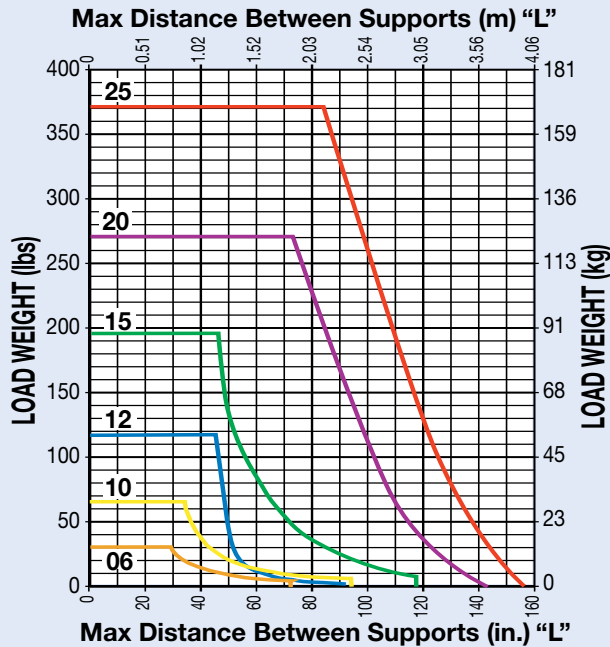

Made of anodized aluminum, BC4 tube supports are designed to attach to T-nuts inside the grooves which run the length of the cylinder tube. Refer to the tube support graph to determine the number of tube supports required.

NOTE: Switches cannot be mounted on the same face of the actuator as tube supports.

BC4 Floating Mount Bracket - ALL Sizes

FLOATING MOUNT BRACKET

ORDER CODE
FL

For applications where a BC4 band cylinder is moving a load that is externally guided and supported. An externally guided load, not parallel to the BC4 band cylinder may result in cylinder binding. The floating mount bracket compensates for nonparallelism between the cylinder and the external guide.

⊗ (Floating mount brackets are not to be used in conjunction with shock absorbers)

DIMENSIONS

06, 10, 12, 15

Please Note: For Dimension "E"
BC406 and BC410 use 2 center holes
BC412 and BC415 use 4 corner holes

20, 25

Please Note: For Dimension "E"
BC420 uses 2 center holes
BC425 uses 4 corner holes

BC4 Switches - ALL Sizes

SWITCHES

There are 10 sensing choices: DC reed, form A (open) or form C (open or closed); AC reed (Triac, open); Hall-effect, sourcing, PNP (open); Hall-effect, sinking, NPN (open); each with either flying leads or QD (quick disconnect). Commonly used to send analog signals to PLC (programmable logic controllers), TLL, CMOS circuit or other controller device. These switches are activated by the actuator's magnet.

Switches contain reverse polarity protection. QD cables are shielded; shield should be terminated at flying lead end.

If necessary to remove factory installed switches, be sure to reinstall on the same side of actuator with scored face of switch toward internal magnet.

CABLE MIN. BEND RADIUS	STATIC	0.630" [16mm]								
	DYNAMIC	Not Recommended								

CAUTION: DO NOT OVER TIGHTEN SWITCH HARDWARE WHEN INSTALLING!

**** WARNING:** Do not exceed power rating (Watt = Voltage X Amperage). Permanent damage to sensor will occur.

*QD = Quick Disconnect; Male coupler is located 6" [152mm] from sensor, Female coupler to flying lead (part #2503-1025) distance is 197" [5m] also see Cable Shielding specification above

REPLACEMENT OF QD SWITCHES MANUFACTURED BEFORE JULY 1, 1997: It will be necessary to replace or rewire the female end coupler.

Reed Switch Life Expectancy: Up to 200,000,000 cycles (depending on load current, duty cycle and environmental conditions)

†Shielded from the female quick disconnect coupler to the flying leads. Shield should be terminated at flying lead end.

§ Maximum current 500mA (not to exceed 10VA) Refer to Temperature vs. Current graph and Voltage Derating graph

§§ Maximum current 250mA (not to exceed 3VA) Refer to Temperature vs. Current graph and Voltage Derating graph

BC4 Shock Absorbers - All Sizes

Rodless cylinders with standard internal cushion offer an effective method of decelerating loads. However, all Tolomatic rodless cylinders are capable of carrying heavier loads at higher velocities than the cylinder cushion can absorb. Optional shock absorbers can be used to increase the cylinder's life and broaden the application range for the cylinder model you have chosen.

A shock stop plate must be used in conjunction with the BC4 shock to provide a stopping surface on the carrier.

Typical shock absorber life varies between 1-2 million cycles (depending on environment) appropriate preventative maintenance should be considered in high cyclic applications.

NOTE: When 2 shock absorbers are ordered, the unit will be assembled with NO internal cushions.

CAUTION: In applications which result in a load bending moment at deceleration, care should be taken to decelerate the load rather than the carrier of the band cylinder.

Rodless Cylinder Selection Guidelines - BC2, BC3, BC4, LS - All Sizes

PROVIDING LOAD GUIDANCE AND SUPPORT

The process of selecting a load bearing actuator for a given application can be complex. It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application. The following overview of the selection guidelines are for educational purposes only.

1 COMPILE APPLICATION REQUIREMENTS

To determine the appropriate Band Cylinder or Linear Slide model for an application, compile the following information:

- Available pressure (PSI)
- Weight of load (lbs or kg)
- Orientation of load (lbs or kgs)
- Velocity of load (in/sec or mm/sec)
- Stroke length (in or mm)

HINT: Use Tolomatic sizing and selection software, download at: tolomatic.com

2 SELECT CYLINDER SIZE

- Consult the Theoretical Force vs. Pressure charts.
- Cross-reference the load force (or load weight if force is not known) and the available operating pressure. If the intersection falls below the diagonal line, and if moments do not exceed maximum values listed for that model (see Step 3), the actuator will accommodate the application.

If the intersection is above the diagonal line, a larger cylinder bore size should be considered.

NOTE: Additional force may be required to obtain the necessary acceleration for vertical or horizontal loads.

3 DETERMINE NATURE OF LOAD AND THE EFFECT OF BENDING MOMENTS

If the cylinder will guide and support a load located directly over the center of carrier, bending moments will not be a factor in the cylinder selection.

NOTE: The maximum load "L" must not exceed the capacity limits of the cylinder selected.

- Bending Moments

For off center or side loads, determine the distance from the center of mass of the load to the center of the carrier bracket. This measurement is needed to calculate the torque for bending moments. (Refer to Bending Moment chart for each model.)

Should the resulting maximum bending moment exceed figures indicated on the chart, external guides, auxiliary carrier/s or a larger cylinder should be considered.

- Auxiliary Carrier Bending Moments

The auxiliary carrier option (available on most models) increases load carrying capacity and bending moments. Auxiliary carriers can be ordered with or without an internal piston. (Auxiliary

carriers without a piston have no internal cushion on the cylinder end closest to the auxiliary carrier.)

IMPORTANT: When ordering, determine the working stroke, then the minimum distance required between carriers (dimension "D" in Auxiliary Carrier Bending Moments chart). When ordered, Tolomatic's configurator will calculate the overall length of the actuator.

NOTE: breakaway pressure will increase when using auxiliary carriers.

4 DETERMINE INTERNAL CUSHION CAPACITY

- Consult the Cushion Data chart for the model selected. The velocities listed on the cushion charts are final or cushion impact velocities. On applications where the internal cushions or bumpers are to be used, be sure the actual, final or impact velocity is known. If the velocity is not known, use of limit switches with valve deceleration circuits or shock absorbers should be considered. NOTE: The BC205 uses external bumpers in place of internal cushions, LS05 & LS10 do not have cushions or bumpers.

- Cross-reference the final velocity and weight of the load. If the intersection is below the diagonal lines, the internal cushions on the actuator may be used. If the point falls above the dashed diagonal line or if the velocity is not known, use deceleration circuits, external shock absorbers or select a

larger cylinder with greater cushion capacity. On high-cyclic applications, use of external stops is strongly recommended.

5 DETERMINE TUBE SUPPORT REQUIREMENTS

- Consult the Tube Support chart for the model selected.
- Cross reference the load weight and maximum distance between supports.

6 CONSIDER OPTIONS

- Switches— dc Reed, Hall-effect or ac Triac

Band Cylinders and Linear Slides each have different standard features and options. Check the options section for the actuator you have selected.

- Shock Absorbers— if needed.
- Foot Mounting Kits
- Floating Mount Bracket – use when lack of parallelism occurs between the cylinder and an external guided and supported load.
- Single End Porting (BC3, BC4)
- Long Carrier (BC4)
- Proximity Sensors (LS)
- Dual 180° Carrier (BC3)

Application Guidelines

The following conditional statements are intended as general guidelines for use of Tolomatic actuators. Since all applications have their own specific operating requirements, consult Tolomatic, Inc. or your local Tolomatic distributor if an application is unconventional or if questions arise regarding the selection process.

CUSHION NEEDLE ADJUSTMENT (BC2, BC3, BC4, CC, SA, DP, TC ONLY)

Adjust the cushion needles in the cylinder heads carefully to obtain a smooth, hesitation free deceleration for your particular application. If there are questions on proper adjustment, please consult Tolomatic, Inc.

LUBRICATION GUIDELINES

All Tolomatic actuators (except Cable Cylinders) are prelubricated at the factory. To ensure maximum actuator life, the following guidelines should be followed.

• Filtration

We recommend the use of dry, filtered air in our products. "Filtered air" means a level of 10 Micron or less. "Dry" means air should be free of appreciable amounts of moisture. Regular maintenance of installed

filters will generally keep excess moisture in check.

• External Lubricators (optional)

The factory prelubrication of Tolomatic actuators will provide optimal performance without the use of external lubrication. However, external lubricators can further extend service life of pneumatic actuators if the supply is kept constant.

Oil lubricators, (mist or drop) should supply a minimum of 1 drop per 20 standard cubic feet per minute to the

cylinder. As a rule of thumb, double that rate if water in the system is suspected. Demanding conditions may require more lubricant.

If lubricators are used, we recommend a non-detergent, 20cP @ 140°F 10-weight lubricant. Optimum conditions for standard cylinder operation are +32° to +150°F (+0° to 65.5°C).

 NOTE: Use of external lubricators may wash away the factory installed lubrication. External lubricants must be maintained in a constant supply or the results will be a dry actuator prone to premature wear.

• Sanitary Environments

Oil mist lubricators must dispense "Food Grade" lubricants to the air supply. Use fluids with ORAL LD50 toxicity ratings of 35 or higher such as Multitherm® PG-1 or equivalent. Demanding conditions can require a review of the application.

FINAL VELOCITY CALCULATION

Velocity calculations for all rodless cylinders need to differentiate between final velocity and average velocity. For example: Stroking a 100-inch BC3 model in one second yields an average velocity of 100 inches per second. To properly determine the inertial forces for cushioning, it is important to know the

final (or impact) velocity. Rodless cylinders accelerate and decelerate at each end of the stroke. Therefore this acceleration must be considered (see diagram).

If final (or impact) velocity cannot be calculated directly, a reasonable guideline is to use 2 x average velocity.

Switch Ordering NOTES:

To order field retrofit switch and hardware kits for all Tolomatic actuators: SW (Then the model and bore size, and type of switch required)

Example: SWBC415RT

(Hardware and Form A Reed switch with 5 meter lead for 1.5" bore BC4 band cylinder)

⚠ Mounting hardware is required if replacing switch for any actuator manufactured before 7/1/97

Service Parts Ordering NOTES:

- Foot Mount Kit contains one bracket and mounting hardware.
- Shock Field Retrofit Kit contains one shock absorber, impact bolt, and mounting hardware.
- Shock Field Mount Kit contains one set of mounting hardware and impact bolt.
- Shock Stop Kit contains shock plate and screws.
- Single End Porting Kit contains replacement head and plugs.
- Contains one tube support and mounting hardware.
- Repair Kit contains End Caps, Bearing Rods, O-rings, U-cups, Wear Rings, Cushion Seals, Band Inserts, Spring Clamps, Sealing Band and Dust Band.
- When ordering repair kits, specify stroke as “SK” then indicate the desired length in decimal inches after the order code indicated above. EXAMPLE: RKBC410SK10.00
- Seal Kit contains End Caps, Bearing Rods, O-rings, U-cups, Wear Rings, Cushion Seals, Band Inserts and Spring Clamps.

It started with a custom solution.

Tolomatic's first product, the Float-A-Shaft®, marked the beginning of Tolomatic's innovative product solutions for the industrial automation market. Burton Toles, Tolomatic's founder, designed the Float-A-Shaft to greatly improve the efficiency of baler/sealing machinery used in the flour and milling industry. The unique right-angle gear box permitted quick product changeover and is still used in the packaging industry today.

On the same baler/sealer machine, customers also wanted a low-cost simple mechanism to lift and sort bags. Again, the Tolomatic solution proved to be a winner with the invention of the cable cylinder – the world's first rodless product. Thus began Tolomatic's product innovation legacy: unique and robust product solutions to solve customer problems.

Tolomatic Milestones

- Founded in 1954 by Burton Toles – invention of the first right-angle gearbox that floats along its shaft.
- Designed the first rodless cylinder in 1958 – the cable cylinder is still in production today!
- Introduction of the BC2 – world's best selling pneumatic rodless cylinder.
- Tolomatic holds a portfolio of patents for actuators and mechanical assemblies.
- Tolomatic becomes ISO certified in October of 1995.
- Tolomatic enters the electromechanical actuator market in 1996 with its first electric actuators.
- Top global auto producer selects Tolomatic as its sole worldwide supplier of servo actuators for robotic welding.
- Over 1,000,000 (and counting) Tolomatic actuators put in service in applications all over the world.

LS - LINEAR SLIDE

ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

STAINLESS STEEL SEALING BAND SYSTEM

- Fatigue resistant stainless steel bands are specifically made to offer longer life and will not elongate like elastomers
- Outer band keeps out contaminants for extended performance
- Inner band provides a smooth surface for less seal wear

FORMED END CAP WIPER SEAL

- Keeps contaminants from entering the sealing area
- Protects internal components
- Reduces maintenance while increasing productivity

LOW CARRIER HEIGHT

- Reduces overall actuator envelope
- Large mounting area for high load stability
- T-Slots for mounting flexibility

STROKE ADJUSTMENT

- End of stroke
- Integrated into design

3-PORTED HEADS

- Single End Porting
- Standard feature
- Simplifies air connections

FORMED STEEL PISTON BRACKET

- Provides maximum strength at major stress points
- Heat treated carbon steel withstands the toughest dynamic forces
- Strongest bracket design in the industry assures long life with less maintenance

TOLOMATIC... THE RODLESS CYLINDER LEADER

◦ RETAINED DUST BAND ◦

- Retained dust band keeps contaminants from entering the cylinder interior, protecting components for reduced maintenance and increased uptime

◦ RIGID BLACK-ANODIZED EXTRUDED ALUMINUM TUBE ◦

- Stronger, stiffer tube retains tolerance specs when chamber is pressurized
- Keeps sealing band in place for maximized air efficiency
- Tube supports are minimized
- Solid structural support provides durability and long life performance

◦ STEEL GUIDE RODS ◦

- Two precision ground steel guide rods integrated with extrusion provides positive support of load

NOTE: Boxed letters indicate ordering codes

◦ LOAD-BEARING CARRIER DESIGN ◦

- Load and piston are independent - piston floats, resulting in less friction and longer seal life

- Bearings offer consistently low friction and long wear; 1/2" bore features composite bearings, 1" bore features precision linear ball bearings

OPTIONS

AUXILIARY CARRIER **D****W** **D****O**

- Substantially higher load capacity
- Substantially higher bending moment capacity

SUPPORTS **M****P**

- Used for intermediate support
- Flush with bottom of actuator to retain low profile
- Drop-in, adjustable mounting locations

T-NUTS

- Used for intermediate support, combine with Tube Supports or mount directly to surface

SHOCK ABSORBERS **S****L** **S****H**

- Smooth deceleration
- Allows increased operating speed
- Self-compensates for load or speed changes
- Minimizes impact load to equipment
- Higher equipment productivity
- Integrated to carrier design

SWITCHES

- Available in Proximity, Reed, Hall-effect and Triac
- 15ft. cable with flying leads; available with quick-disconnect couplers

LS Auxiliary Carrier - All Sizes

PERFORMANCE

The auxiliary carrier option substantially increases load carrying and bending moments capacity over the standard single carrier models. As a general rule, the auxiliary carrier option is highly recommended in vertical applications (M_y) if the distance from the carrier mounting surface to the load center of gravity (CG) exceeds the overall length of the carrier. Auxiliary carriers can be ordered with (DW) or without (DO) an internal piston. (Auxiliary carriers without a piston have no cushion on the cylinder end closest to the auxiliary carrier.)

NOTE: breakaway pressure will increase when using auxiliary carrier.

BENDING MOMENTS

LS05 AUXILIARY CARRIER LOAD vs DISTANCE

LS10 AUXILIARY CARRIER LOAD vs DISTANCE

Rates were calculated with the following assumptions:

- 1.) Coupling between carriers is rigid.
- 2.) Load is equally distributed between carriers.
- 3.) Coupling device applies no misalignment loads to carriers.

	BORE SIZE		"D" MINIMUM *		MAX. BENDING MOMENT						MAX. LOAD	
					M_y^{**}		M_x		M_z^{**}		F_z	
	in	mm	in	mm	in-lbs	N-m	in-lbs	N-m	in-lbs	N-m	lbs	kg
05	0.50	12	3.63	92.2	9.51	1.07	16.00	1.81	14.27	1.61	20	9.08
10	1.00	25	5.75	146.1	177.80	20.09	160.00	18.08	277.80	31.30	200	90.8

* "D" is distance between carriers

** Loads calculated are at minimum "D", for substantially higher M_y and M_z loads increase "D" and refer to graph above

LS Auxiliary Carrier - All Sizes

AUXILIARY CARRIER

ORDERING INFORMATION

When ordering, determine the minimum distance required between carriers (dimension "D" in Auxiliary Carrier Bending Moments chart).

Determine your working stroke and your "D" dimension, then enter these into your configuration string. (Example: LS10SK30.00DW8.00RT2) The configurator will calculate the overall length of the actuator. Refer to page LS_13 for complete LS ordering information.

ASSEMBLY INFORMATION

IMPORTANT INFORMATION REGARDING AUXILIARY CARRIER PLACEMENT

When an LS is ordered without shock absorbers, the auxiliary carrier is always placed to the left (while facing the switch mounted or open port side) of the main carrier.

When an LS is ordered with shock absorbers, the auxiliary carrier is always placed to the right (while facing the switch mounted or open port side) of the main carrier.

Custom Capabilities

Tolomatic's custom model shop can create first-piece prototypes with the industry's fastest turnaround times.

Custom Solutions are Standard Business

Hundreds of customers partner with Tolomatic to solve unique automation application challenges. We are geared to handle design requests—from our Model Shop (for fast prototypes) all the way through our ISO 9001:2000 certified manufacturing facility. Over 33% of our total business is based on products not found in our standard catalog.

With an innovation mindset, years of solid industry experience, and fast response times, let Tolomatic help you get the job done. If you are looking for linear motion solutions—pneumatic or electromechanical—and you cannot find a catalog product, get with Tolomatic. You will experience what we mean by **Excellence in Motion**.

LS Switches - All Sizes

SWITCHES

There are 10 sensing choices: DC reed, form A (open) or form C (open or closed); AC reed (Triac, open); Hall-effect, sourcing, PNP (open); Hall-effect, sinking, NPN (open); each with either flying leads or QD (quick disconnect). Commonly used to send analog signals to PLC (programmable logic controllers), TLL, CMOS circuit or other controller device. These switches are activated by the actuator's magnet.

Switches contain reverse polarity protection. QD cables are shielded; shield should be terminated at flying lead end.

If necessary to remove factory installed switches, be sure to reinstall on the same side of actuator with scored face of switch toward internal magnet.

LS Shock Absorbers - All Sizes

SHOCK ABSORBERS

ORDER CODE
SH_ or SL_
(_ = Number ordered)

Rodless cylinders with standard internal cushion offer an effective method of decelerating loads. However, all Tolomatic rodless cylinders are capable of carrying heavier loads at higher velocities than the cylinder cushion can absorb. Optional shock absorbers can be used to increase the cylinder's life and broaden the application range for the cylinder model you have chosen.

Typical shock absorber life varies between 1-2 million cycles (depending on environment). Appropriate preventative maintenance should be considered in high cyclic applications.

NOTE: Actuators ordered without selecting a shock absorber MUST have external stops. The LS does NOT have internal bumpers or cushions.

CAUTION: In applications which result in a load bending moment at deceleration, care should be taken to decelerate the load rather than the carrier of the band cylinder.

Rodless Cylinder Selection Guidelines - BC2, BC3, BC4, LS - All Sizes

PROVIDING LOAD GUIDANCE AND SUPPORT

The process of selecting a load bearing actuator for a given application can be complex. It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application. The following overview of the selection guidelines are for educational purposes only.

1 COMPILE APPLICATION REQUIREMENTS

To determine the appropriate Band Cylinder or Linear Slide model for an application, compile the following information:

- Available pressure (PSI)
- Weight of load (lbs or kg)
- Orientation of load (lbs or kgs)
- Velocity of load (in/sec or mm/sec)
- Stroke length (in or mm)

HINT: Use Tolomatic sizing and selection software, download at: tolomatic.com

2 SELECT CYLINDER SIZE

- Consult the Theoretical Force vs. Pressure charts.
- Cross-reference the load force (or load weight if force is not known) and the available operating pressure. If the intersection falls below the diagonal line, and if moments do not exceed maximum values listed for that model (see Step 3), the actuator will accommodate the application.

If the intersection is above the diagonal line, a larger cylinder bore size should be considered.

NOTE: Additional force may be required to obtain the necessary acceleration for vertical or horizontal loads.

3 DETERMINE NATURE OF LOAD AND THE EFFECT OF BENDING MOMENTS

If the cylinder will guide and support a load located directly over the center of carrier, bending moments will not be a factor in the cylinder selection.

NOTE: The maximum load "L" must not exceed the capacity limits of the cylinder selected.

- Bending Moments

For off center or side loads, determine the distance from the center of mass of the load to the center of the carrier bracket. This measurement is needed to calculate the torque for bending moments. (Refer to Bending Moment chart for each model.)

Should the resulting maximum bending moment exceed figures indicated on the chart, external guides, auxiliary carrier/s or a larger cylinder should be considered.

- Auxiliary Carrier Bending Moments

The auxiliary carrier option (available on most models) increases load carrying capacity and bending moments. Auxiliary carriers can be ordered with or without an internal piston. (Auxiliary

carriers without a piston have no internal cushion on the cylinder end closest to the auxiliary carrier.)

IMPORTANT: When ordering, determine the working stroke, then the minimum distance required between carriers (dimension "D" in Auxiliary Carrier Bending Moments chart). When ordered, Tolomatic's configurator will calculate the overall length of the actuator.

NOTE: breakaway pressure will increase when using auxiliary carriers.

4 DETERMINE INTERNAL CUSHION CAPACITY

- Consult the Cushion Data chart for the model selected. The velocities listed on the cushion charts are final or cushion impact velocities. On applications where the internal cushions or bumpers are to be used, be sure the actual, final or impact velocity is known. If the velocity is not known, use of limit switches with valve deceleration circuits or shock absorbers should be considered. NOTE: The BC205 uses external bumpers in place of internal cushions, LS05 & LS10 do not have cushions or bumpers.
- Cross-reference the final velocity and weight of the load. If the intersection is below the diagonal lines, the internal cushions on the actuator may be used. If the point falls above the dashed diagonal line or if the velocity is not known, use deceleration circuits, external shock absorbers or select a

larger cylinder with greater cushion capacity. On high-cyclic applications, use of external stops is strongly recommended.

5 DETERMINE TUBE SUPPORT REQUIREMENTS

- Consult the Tube Support chart for the model selected.
- Cross reference the load weight and maximum distance between supports.

6 CONSIDER OPTIONS

- Switches— dc Reed, Hall-effect or ac Triac

Band Cylinders and Linear Slides each have different standard features and options. Check the options section for the actuator you have selected.

- Shock Absorbers— if needed.
- Foot Mounting Kits
- Floating Mount Bracket – use when lack of parallelism occurs between the cylinder and an external guided and supported load.
- Single End Porting (BC3, BC4)
- Long Carrier (BC4)
- Proximity Sensors (LS)
- Dual 180° Carrier (BC3)

Application Guidelines

The following conditional statements are intended as general guidelines for use of Tolomatic actuators. Since all applications have their own specific operating requirements, consult Tolomatic, Inc. or your local Tolomatic distributor if an application is unconventional or if questions arise regarding the selection process.

LUBRICATION GUIDELINES

All Tolomatic actuators (except Cable Cylinders) are prelubricated at the factory. To ensure maximum actuator life, the following guidelines should be followed.

- **Filtration**

We recommend the use of dry, filtered air in our products. “Filtered air” means a level of 10 Micron or less. “Dry” means air should be free of appreciable amounts of moisture. Regular maintenance of installed

filters will generally keep excess moisture in check.

- **External Lubricators (optional)**

The factory prelubrication of Tolomatic actuators will provide optimal performance without the use of external lubrication. However, external lubricators can further extend service life of pneumatic actuators if the supply is kept constant.

Oil lubricators, (mist or drop) should supply a minimum of 1 drop per 20 standard cubic feet per minute to the

cylinder. As a rule of thumb, double that rate if water in the system is suspected. Demanding conditions may require more lubricant.

If lubricators are used, we recommend a non-detergent, 20cP @ 140°F 10-weight lubricant. Optimum conditions for standard cylinder operation are +32° to +150°F (+0° to 65.5°C).

NOTE: Use of external lubricators may wash away the factory installed lubrication. External lubricants must be maintained in a constant supply or the results will be a dry actuator prone to premature wear.

- **Sanitary Environments**

Oil mist lubricators must dispense “Food Grade” lubricants to the air supply. Use fluids with ORAL LD50 toxicity ratings of 35 or higher such as Multitherm® PG-1 or equivalent. Demanding conditions can require a review of the application.

FINAL VELOCITY CALCULATION

Velocity calculations for all rodless cylinders need to differentiate between final velocity and average velocity. For example: Stroking a 100-inch BC3 model in one second yields an average velocity of 100 inches per second. To properly determine the inertial forces for cushioning, it is important to know the

final (or impact) velocity. Rodless cylinders accelerate and decelerate at each end of the stroke. Therefore this acceleration must be considered (see diagram).

If final (or impact) velocity cannot be calculated directly, a reasonable guideline is to use 2 x average velocity.

MAG COUPLED CYLINDER

ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

With magnetically coupled cylinders there is no mechanical connection of the carrier to the piston. The fully enclosed actuator body prevents contaminants from entering or escaping the actuator body. The perfect choice for applications where there are environmental concerns. Features internal polyurethane bumpers for dampened end-of-travel impact, anodized aluminum heads and actuator block, and a field-repairable design to practically eliminate maintenance downtime.

Air or oil actuated to 100 PSIG. With no mechanical piston connection, the actuator block can be easily rotated for increased mounting flexibility.

MGS MAG SLIDE

BEARING CHOICE

- Precision linear ball bearing or
- Sintered bronze

ANODIZED ALUMINUM CARRIER

- Durable and corrosion resistant
- Precision milled

FIELD REPAIRABLE DESIGN

- Unique in the industry
- Durable and reliable

ENGINEERED ELASTOMER WIPER

- No leak construction
- Durable, long lasting material

MG MAG CYLINDER

ANODIZED ALUMINUM HEADS

- Durable and corrosion resistant

TOLOMATIC... THE RODLESS CYLINDER LEADER

• DECELERATION •

- Built-in shock absorber mounting
- External bumpers standard
- End of stroke adjustment

• MULTIPLE-PORTED HEAD • BLOCKS

- Flexible air connection to suit your application

• HARDENED STEEL SHAFTS •

- Corrosion resistant, durable and stable support system

• STAINLESS STEEL TUBING •

- Precision milled interior on these long lasting, corrosion resistant tubes

• MAGNETIC FORCE • CONNECTS PISTON • TO CARRIER

- Rare earth magnets create positive connection between piston and carrier
- 3 coupling strengths
- Decouples at known force (useful in a variety of applications)
- Wear bearing for long life

OPTIONS - CYLINDER

FLOATING MOUNT BRACKET **[FL]**

- Compensates for non-parallelism between cylinder and independently guided load
- Makes installation easier, increases actuator block bearing life

FOOT MOUNT **[FM]**

- Best mounting choice in most applications
- Made from plated stamped steel

SWITCHES

- Available in Reed, Hall-effect and Triac
- 15ft. cable with flying leads; available with quick-disconnect couplers

CORROSION RESISTANT

- Stainless steel components with seals for use in harsh environments

OPTIONS - SLIDE

SHOCK ABSORBERS **[SL SH]**

- Smoother deceleration
- Self-compensates for load changes
- Reduces need for equipment maintenance

PROXIMITY SENSOR

- L.E.D. device senses end-of-stroke with one of two normally open inductive dc proximity sensors.

SWITCHES

- Available in Reed, Hall-effect and Triac
- 15ft. cable with flying leads; available with quick-disconnect couplers

• PNEUMATICALLY OR • HYDRAULICALLY POWERED

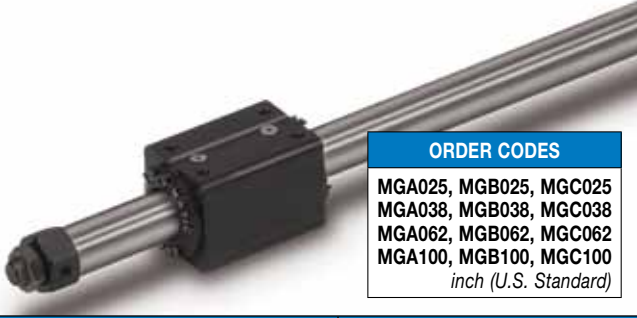

- No leak construction
- Up to 100 PSI

MG Foot Mount - All Sizes

Foot mounts are an excellent mounting alternative. Made from plated stamped steel, foot mounts are attached to cylinder heads as shown in the dimension drawing, below. Foot mounts may be ordered for one or both ends of the cylinder. Foot mounts can then be attached to almost any surface at a 90° angle to provide solid support without affecting stroke.

MG Floating Mount Bracket - All Sizes

The integral floating mount bracket is available for applications in which a load is externally guided and supported and there is a need to compensate for non-parallelism between the cylinder and the independently-guided load.

Loads which are not parallel to the cylinder may result in the cylinder binding if the floating mount bracket is not used. Also, use of the floating mount is highly recommended to provide easier set-up of guide/support system and to help increase actuator block bearing life.

MG & MGS Switches - All Sizes

SWITCHES

There are 10 sensing choices: DC reed, form A (open) or form C (open or closed); AC reed (Triac, open); Hall-effect, sourcing, PNP (open); Hall-effect, sinking, NPN (open); each with either flying leads or QD (quick disconnect). Commonly used to send analog signals to PLC (programmable logic controllers), TLL, CMOS circuit or other controller device. These switches are activated by the actuator's magnet.

Switches contain reverse polarity protection. QD cables are shielded; shield should be terminated at flying lead end.

If necessary to remove factory installed switches, be sure to reinstall on the same of side of actuator with scored face of switch toward internal magnet.

CAUTION: DO NOT OVER TIGHTEN SWITCH HARDWARE WHEN INSTALLING!

**** WARNING:** Do not exceed power rating (Watt = Voltage X Amperage). Permanent damage to sensor will occur.

*QD = Quick Disconnect; Male coupler is located 6" [152mm] from sensor, Female coupler to flying lead (part #2503-1025) distance is 197" [5m] also see Cable Shielding specification above

REPLACEMENT OF QD SWITCHES MANUFACTURED BEFORE JULY 1, 1997: It will be necessary to replace or rewire the female end coupler.

Reed Switch Life Expectancy: Up to 200,000,000 cycles (depending on load current, duty cycle and environmental conditions)

†Shielded from the female quick disconnect coupler to the flying leads. Shield should be terminated at flying lead end.

MGS Shock Absorbers - All Sizes

SHOCK ABSORBERS

ORDER CODE

SD_ or SH_ or SL_
(_ = Number ordered)

Magnetically coupled slides with standard internal bumpers offer an effective method of decelerating loads. However, magnetically coupled slides are capable of carrying heavier loads at higher velocities than the internal bumpers can absorb. Optional shock absorbers can be used to increase the unit's life and broaden the application range for the magnetically coupled slide you have chosen.

Typical shock absorber life varies between 1-2 million cycles (depending on environment). Appropriate preventative maintenance should be considered in high cyclic applications.

⚠ CAUTION: In applications which result in a load bending moment at deceleration, care should be taken to decelerate the load rather than the carrier of the magnetically coupled slide.

MG: Mag Coupled Cylinder Selection Guidelines - All Sizes

EXTERNAL LOAD GUIDANCE AND SUPPORT

The process of selecting a magnetically coupled cylinder for a given application can be complex. **It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application. The following overview of the selection guidelines are for educational purposes only.**

1 COMPILE APPLICATION REQUIREMENTS

To determine the appropriate Magnetically Coupled Cylinder model for an application, compile the following information:

- Available pressure (PSI)
- Weight of load (lbs. or kgs.)
- Orientation of load (lbs. or kgs.)
- Velocity of load (in./sec. or mm/sec.)
- Stroke length (in. or mm)

2 SELECT CYLINDER SIZE

- Consult the Theoretical Force vs. Pressure charts.
- Cross-reference the load force (or load weight if force is not known) and the available operating pressure. If the intersection falls below the diagonal line, and if moments do not exceed maximum values listed for that model (see Step 3), the actuator will accommodate the application. If the intersection is above the diagonal line, a larger cylinder bore size should be considered.

NOTE: Additional force may be required to obtain the necessary acceleration for vertical or horizontal loads.

3 DETERMINE COUPLING FORCE REQUIREMENTS

Use the following formula:

$$F = .013 \times \text{Weight} \times \text{Velocity}^2$$

Calculated value must be less than the Magnetic Coupling Strength values. (page MG_04)

4 DETERMINE INTERNAL CUSHION CAPACITY

- Consult the Cushion Data chart for the model selected. The velocities listed on the cushion charts are final or cushion impact velocities. On applications where the internal cushions or bumpers are to be used, be sure the actual, final or impact velocity is known. If the velocity is not known, use of limit switches with valve deceleration circuits or shock absorbers should be considered.

Cross-reference the final velocity and weight of the load. If the intersection is below the diagonal lines, the internal cushions on the actuator may be used. If the point falls above the dashed diagonal line or if the velocity is not known, use deceleration circuits, external shock absorbers or select a larger cylinder with greater cushion capacity. On high-cyclic applications, use of external stops is strongly recommended.

NOTE: Magnetically coupled cylinders do not have internal cushions. Heavier loads require external stops or shock absorbers.

MGS: Mag Coupled Slide Selection Guidelines - All Sizes

PROVIDING LOAD GUIDANCE AND SUPPORT

1 COMPILE APPLICATION REQUIREMENTS

To determine the appropriate Magnetically Coupled Slide for an application, compile the following information:

- Available pressure (PSI)
- Weight of load (lbs. or kgs.)
- Orientation of load (lbs. or kgs.)
- Velocity of load (in./sec. or mm/sec.)
- Stroke length (in. or mm)

2 SELECT CYLINDER SIZE

- Consult the Theoretical Force vs. Pressure charts.
- Cross-reference the load force (or load weight if force is not known) and the available operating pressure. If the intersection falls below the diagonal line, and if moments do not exceed maximum values listed for that model (see Step 3), the actuator will accommodate the application. If the intersection is above the

diagonal line, a larger cylinder bore size should be considered.

NOTE: Additional force may be required to obtain the necessary acceleration for vertical or horizontal loads.

3 KEEP UNDER MAXIMUM STROKE LENGTH

There are specific maximum stroke lengths for each model.
MGS038: 30.00"
MGS062: 37.00"
MGS100: 55.00"

4 DETERMINE NATURE OF LOAD AND THE EFFECT OF BENDING MOMENTS

If the actuator will guide and support a load located directly over the center of carrier, bending moments will not be a factor in the actuator selection. Magnetically Coupled Slides perform best that way. See the Bending Moments Formulae below if your application requires the load to be away from center of the carrier.

5 DETERMINE THE BEARING ROD LOAD CAPACITY

Determine whether the Load Weight and Stroke Length will be within the load capacity for the bearing rods.

Cross reference the load weight and stroke on the Load Weight vs. Stroke chart for the selected bore size. (Page MG_6) If the intersection falls below the curve, the cylinder will accommodate the application requirements. If the intersection falls outside the curve, consult the chart of a larger bore size that will accommodate the required load weight and stroke for your application.

The weight on the bearing rods causes them to bend or deflect slightly over their length. This deflection is increased for longer rods and/or higher weights on the bearing block. For proper operation, rod deflection must not exceed .30".

6 DETERMINE COUPLING FORCE REQUIRED

- Consult the Mag Coupling Strength chart (page MG_6). If the load value is less than the coupling force for the chosen actuator, it may be used for the application. If the load value is greater than the coupling force for the chosen actuator, select a larger actuator.

7 DETERMINE INTERNAL BUMPER CAPACITY

- Consult the Cushion Data chart (Bumper Data for Magnetically Coupled Slides page MG_14) for the model selected. The velocities listed on the cushion charts are final or cushion impact velocities. On applications where internal bumpers are to be used, be sure the actual, final or impact velocity is known. If the velocity is not known, use of limit switches with valve deceleration circuits or shock absorbers should be considered.

BENDING MOMENTS Loading Equation Data

MODEL	BORE SIZE	A (in.)	D (in.)	F (lbs.)	G (lbs.)
MGS038	3/8"	1.44	1.13	14.00	11.00
MGS062	5/8"	1.94	1.50	40.00	32.00
MGS100	1"	2.62	2.00	90.00	72.00

(See MGS Load vs Stroke graph on page MG_6)

Loading Equation Key

- A** = Distance between shaft centers
- B** = Distance from load center to center of nearest shaft (in.); determined by application

- L** = Load per shaft (lbs.)
- W** = Payload weight (lbs.)
- D** = Axial distance between center of bearings (in.)

- F** = Max. bearing sliding load (linear bearings) (lbs.)
- G** = Max. bearing sliding load (sintered bronze bearings) (lbs.)

"L" MOMENT

$$L = \frac{W}{2}$$

"Mx" MOMENT

$$L = \frac{WB}{A}$$

"My" / "Mz" MOMENT

$$F \text{ or } G = 2L = \frac{WB}{D}$$

L should be below curve for the corresponding slide on the "Load vs. Stroke" chart (for sintered bronze or linear bearings - Mag Coupled Slides).

Application Guidelines

The following conditional statements are intended as general guidelines for use of Tolomatic actuators. Since all applications have their own specific operating requirements, consult Tolomatic, Inc. or your local Tolomatic distributor if an application is unconventional or if questions arise regarding the selection process.

LUBRICATION GUIDELINES

All Tolomatic actuators (except Cable Cylinders) are prelubricated at the factory. To ensure maximum actuator life, the following guidelines should be followed.

• Filtration

We recommend the use of dry, filtered air in our products. "Filtered air" means a level of 10 Micron or less. "Dry" means air should be free of appreciable amounts of moisture. Regular maintenance of installed

filters will generally keep excess moisture in check.

• External Lubricators (optional)

The factory prelubrication of Tolomatic actuators will provide optimal performance without the use of external lubrication. However, external lubricators can further extend service life of pneumatic actuators if the supply is kept constant.

Oil lubricators, (mist or drop) should supply a minimum of 1 drop per 20 standard cubic feet per minute to the

cylinder. As a rule of thumb, double that rate if water in the system is suspected. Demanding conditions may require more lubricant.

If lubricators are used, we recommend a non-detergent, 20cP @ 140°F 10-weight lubricant. Optimum conditions for standard cylinder operation are +32° to +150°F (+0° to 65.5°C).

NOTE: Use of external lubricators may wash away the factory installed lubrication. External lubricants must be maintained in a constant supply or the results will be a dry actuator prone to premature wear.

• Sanitary Environments

Oil mist lubricators must dispense "Food Grade" lubricants to the air supply. Use fluids with ORAL LD50 toxicity ratings of 35 or higher such as Multitherm® PG-1 or equivalent. Demanding conditions can require a review of the application.

FINAL VELOCITY CALCULATION

Velocity calculations for all rodless cylinders need to differentiate between final velocity and average velocity. For example: Stroking a 100-inch BC3 model in one second yields an average velocity of 100 inches per second. To properly determine the inertial forces for cushioning, it is important to know the

final (or impact) velocity. Rodless cylinders accelerate and decelerate at each end of the stroke. Therefore this acceleration must be considered (see diagram).

If final (or impact) velocity cannot be calculated directly, a reasonable guideline is to use 2 x average velocity.

It started with a custom solution.

Tolomatic's first product, the Float-A-Shaft®, marked the beginning of Tolomatic's innovative product solutions for the industrial automation market. Burton Toles, Tolomatic's founder, designed the Float-A-Shaft to greatly improve the efficiency of baler/sealing machinery used in the flour and milling industry. The unique right-angle gear box permitted quick product changeover and is still used in the packaging industry today.

On the same baler/sealer machine, customers also wanted a low-cost simple mechanism to lift and sort bags. Again, the Tolomatic solution proved to be a winner with the invention of the cable cylinder – the world's first rodless product. Thus began Tolomatic's product innovation legacy: unique and robust product solutions to solve customer problems.

Tolomatic Milestones

- Founded in 1954 by Burton Toles – invention of the first right-angle gearbox that floats along its shaft.
- Designed the first rodless cylinder in 1958 – the cable cylinder is still in production today!
- Introduction of the BC2 – world's best selling pneumatic rodless cylinder.
- Tolomatic holds a portfolio of patents for actuators and mechanical assemblies.
- Tolomatic becomes ISO certified in October of 1995.
- Tolomatic enters the electromechanical actuator market in 1996 with its first electric actuators.
- Top global auto producer selects Tolomatic as its sole worldwide supplier of servo actuators for robotic welding.
- Over 1,000,000 (and counting) Tolomatic actuators put in service in applications all over the world.

CC Cable Cylinder

PERFORMANCE

Introduced in 1955 as the first rodless cylinder, the Tolomatic cable cylinder provides reliable linear motion with space and cost-savings features. Its simple yet efficient design solves a wide variety of application requirements. Unlike rod cylinders, the cable cylinder's stroke is contained within the cylinder itself. That can

be a big advantage when space limitations are a consideration. The cable cylinder also allows equal force to be applied in both directions. Cables (fastened to both ends of the piston) pass through gland seals at the ends of the cylinder tube, go around pulleys and are then joined by a load bracket or clevis. The cables can

be cut different lengths, threaded through a machine or wrapped around a drum to fill a wide variety of rotary and/or linear motion requirements. First in the industry to offer an automatic tensioning cylinder and combine it with a caliper disc brake for static holding, Tolomatic also offers reed switch

options on most cylinder models. Available in double-acting, single-acting, double purchase and track cylinder models with 11 bore sizes ranging from 1/2-inch to 5 inches and stroke lengths ranging from a few inches to 60 feet, there is a Tolomatic cable cylinder that can do the job for you.

CABLE CYLINDER

ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

HIGH STRENGTH TUBE

- High-strength, lightweight 6063-T832 black anodized aluminum or steel
- Creates chamber for pneumatic or hydraulic pressure and protects piston

STEEL CLEVIS

- High strength material resists deformation
- Cable adjustment points
- Threaded holes for load attachment

DOUBLE ACTING CABLE CYLINDER

PORTING CHOICES

- Choose from 2 or 3 port heads

ALUMINUM PISTON

- High-strength, lightweight aluminum
- Pulls the cables when actuated by pneumatic or hydraulic pressure

DIE CAST HEAD ASSEMBLY

- High-strength, lightweight anodized aluminum
- Protects piston and creates chamber for pneumatic or hydraulic pressure

LOCATE REMOTELY

- Cylinder can be located away from work area. Useful in harsh environments and if space/weight are limited

UNIQUE GLAND SEALS

- Tight seal for cables to pass through
- Easy installation
- Snap In/Out cable seals or encapsulated gland seals depending on bore size

TOLOMATIC... THE RODLESS CYLINDER LEADER

MIL SPEC CABLES

- Field proven to provide millions of cycles of uninterrupted service
- Nylon jacketed aircraft cables manufactured under Mil Spec. MIL-W-83420D

SA SINGLE ACTING CABLE CYLINDER

- Use in vertical applications when double acting cable cylinder is not required
- Can be positioned horizontally and achieve vertical movement

DP DOUBLE PURCHASE CABLE CYLINDER

- Doubles the velocity and stroke capacity of cable cylinder without increasing space requirements
- Stroke lengths up to 120 feet (36.6m)
- Isolates cylinder from harsh environments

TC TRACK CABLE CYLINDER

- Guides and supports load
- Precision linear ball bearings on hardened ground steel shafts

OPTIONS

AUTO TENSIONER

- Maintains proper cable tension
- Maximizes service life of both cable and seals

CALIPER DISC BRAKE **HM HN**

- Best mounting choice in most applications

STEEL TUBE

- For extra strength & use in harsh environments

3 PORTED HEAD

- For convenient air connection

SWITCHES

- Available in Reed and Triac
- 15ft. cable with flying leads; available with quick-disconnect couplers

SEALS OF VITON® MATERIAL **V**

- Long lasting seal option
- High temperature applications

EXTRA CABLE **XA XB**

- To remotely locate cable cylinder

5 DAYS
BUILT-TO-ORDER

CC Double Acting Cable Cylinder - All Sizes

The Tolomatic double-acting cable cylinder is a versatile space saver, available in all 9 bore sizes. Enjoy cost savings over conventional rod cylinders in strokes over four feet without experiencing rod buckle.

These cylinders can be isolated from any work area with extended cable lengths and achieve strokes of up to 60 feet in length.

NOTE: Adjustable cushions are standard on all models except the CC07 and CC10 which feature fixed-orifice cushions. There are no cushions on the CC05 or CC50 models.

SA Single Acting Cable Cylinder - All Sizes

When a standard double-acting cable cylinder is not necessary in vertical applications, Tolomatic single-acting cable cylinders provide a cost savings advantage. Ideal for vertical lifting applications, these cylinders may be positioned horizontally and still achieve a vertical movement. Tolomatic single-acting cylinders are available in 8 bore sizes ranging from 3/4-inch to 5 inches with optional reed switches.

NOTE: For performance, tubing and cable specifications, refer to the corresponding model in the double-acting cable cylinder section of this catalog. (See page cc_6)

Double Purchase Cable Cylinder - All Sizes

The Tolomatic double purchase cable cylinder doubles the velocity and stroke capacity of double-acting cylinders without increasing space requirements. Available in 5 bore sizes, these cylinders can extend stroke lengths up to 120 feet with considerable cost-saving advantages and they can be placed away from hostile environments. For performance and tubing specifications, refer to the corresponding model in the double-acting cable cylinder section of this catalog. (See page cc_6)

NOTE: Pulleys and cables used on double purchase cable cylinders are always from the next smaller model size.

For double purchase applications, select a bore size that will accommodate twice the load force.

TC Track Cable Cylinder - All Sizes

Tolomatic track cable cylinders provide a pre-packaged, pre-engineered guide and support system for greater bearing surface and larger load capacities.

An aluminum bearing block guides and supports loads on precision linear ball bearings with hardened ground steel shafts. Available in 4 bore sizes with automatic tensioners and caliper disc brake options on selected models.

For track cylinder selection procedures, refer to page CC_35.

NOTE: For tubing and cable specifications for each model, refer to tables listed in the double-acting cable cylinder section of this catalog. (See page CC_6)

CC Automatic Tensioner - All Sizes

Automatic tensioners are required when a cylinder's stroke length is beyond the maximum stroke length for full manual cable adjustment for that bore size. The AT unit keeps the cable rigid and ensures maximum service life of both the cable and gland seals. AT units are also recommended for vertical lifting or severe, high-cyclic applications.

The standard automatic tensioner unit has a 1-inch stroke, providing 2 inches of cable take-up. A 2-inch stroke AT unit may be installed on a cylinder, providing 4 inches of cable take-up. Refer to the tables below for tensioner stroke options on available bore sizes.

MAXIMUM STROKE LENGTHS FOR CYLINDERS WITH AUTO TENSIONERS

NOTE: A cable cylinder should be completely proof-loaded and pretensioned with either the

Torque Method or the Field Method in order for the auto tensioner to achieve the maximum stroke lengths shown in the table below. (For

more information on proof-loading and pretensioning, please see page CC_36)

STROKE OPTIONS	STROKE LENGTHS IN INCHES BASED ON CYLINDER'S MAXIMUM OPERATING PRESSURE

Auto Tensioner with two 2" stroke units	NA	NA	NA	NA	13.32	8.20	12.37	7.04	18.14	12.01

Above Dimensions in METERS

NOTE: Tube couplers are required on cable cylinders with strokes over 280 inches (7.11m).

Maximum stroke lengths in the above table can be extended by using the percentage of the pressure differential between the cylinder's actual operating pressure and the maximum operating pressure.

Example: If the cylinder selected is a CC15 (1 1/2-inch bore) with one 1-inch stroke AT unit:

Actual PSI: 80
Max. PSI: 100
Differential: 20%

20% x 361.2 in. (maximum stroke) = 72.24 in.
72.24 in. + 361.2 in. = 433.44 in. (36.12 feet)

All AT units should be plumbed with a separate, regulated non-fluctuating pressure source which is a set percentage of the actual cylinder operating pressure. These are listed in the table at the right.

NOTE: When using an AT unit in an application where the cylinder is loaded in only one direction, it is recommended to have the AT unit located so the load direction of travel is away from the AT

unit. On vertical applications, the AT unit should be located on the bottom.

CC, SA, DP, TC Switches - All Sizes

SWITCHES

There are 10 sensing choices: DC reed, form A (open) or form C (open or closed); AC reed (Triac, open); Hall-effect, sourcing, PNP (open); Hall-effect, sinking, NPN (open); each with either flying leads or QD (quick disconnect). Commonly used to send analog signals to PLC (programmable logic controllers), TLL, CMOS circuit or other controller device. These switches are activated by the actuator's magnet.

Switches contain reverse polarity protection. QD cables are shielded; shield should be terminated at flying lead end.

If necessary to remove factory installed switches, be sure to reinstall on the same of side of actuator with scored face of switch toward internal magnet.

CC: Cable Cylinder Selection Guidelines - All Sizes

EXTERNAL LOAD GUIDANCE AND SUPPORT

The process of selecting a cable cylinder for a given application can be complex. It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application. The following overview of the selection guidelines are for educational purposes only.

1 COMPILE APPLICATION REQUIREMENTS

To determine the appropriate Cable Cylinder for an application, compile the following information:

- Available pressure (PSI)
- Weight of load (lbs. or kgs.)
- Orientation of load (lbs. or kgs.)
- Velocity of load (in./sec. or mm/sec.)
- Stroke length (in. or mm)

2 SELECT CYLINDER SIZE

- Consult the Theoretical Force vs. Pressure charts.
- Cross-reference the load force (or load weight if force is not known) and the available operating pressure. If the intersection falls below the diagonal line, and if moments do not exceed maximum values listed for that model (see Step 3), the actuator will accommodate the application. If the intersection is above the

diagonal line, a larger cylinder bore size should be considered.

NOTE: Additional force may be required to obtain the necessary acceleration for vertical or horizontal loads.

3 DETERMINE INTERNAL CUSHION CAPACITY

- Consult the Cushion Data chart for the model selected. The velocities listed on the cushion charts are final or cushion impact velocities. On applications where the internal cushions or bumpers are to be used, be sure the actual, final or impact velocity is known. If the velocity is not known, use of limit switches with valve deceleration circuits or shock absorbers should be considered. Cross-reference the final velocity and weight of the load. If the intersection is below the diagonal lines, the internal cushions on the actuator may be used. If the point falls above the dashed diagonal line or if the velocity is not known, use deceleration circuits, external shock absorbers or select a larger cylinder with greater cushion capacity. On high-cyclic applications, use of external stops is strongly recommended.

NOTE: The 1/2-inch and 5-inch cable cylinders and all sizes of magnetically coupled cylinders do not have internal cushions.

The 1/2-inch cable cylinder can handle only very light inertial loads (5 pounds or less). Heavier loads require external stops or shock absorbers.

4 DETERMINE THE MAXIMUM STROKE LENGTHS FOR FULL MANUAL CABLE ADJUSTMENT (CC ONLY)

Once you have selected the proper bore size for your application and determined the cylinder's cushion capacity, you need to determine the physical stroke length limitation of the cylinder. Refer to the table below to find the bore size selected and its maximum stroke length.

NOTE: Maximum recommended stroke length for full manual cable adjustment is the maximum stroke length at which the cables can be properly proof-loaded, pretensioned and maintained at the required tension by manually adjusting the clevis terminal lock nuts. Maximum stroke length is based on the cylinder's maximum pressure rating.

If the stroke length for your application falls within the maximum stroke length for full manual cable adjustment, your model selection is complete. (Refer to graph on page CC_31.)

IMPORTANT NOTE: Once a cylinder is installed in an application, but before putting it into service, the cables must be proof-loaded and pretensioned for proper operation. Refer to Application Guidelines on page CC_36 for proof-loading and pretensioning methods.

If your stroke length is beyond the maximum stroke lengths shown, you have two options available.

1. Increase the maximum stroke length of the selected cylinder size by the percentage of the

pressure differential between the cylinder's actual operating pressure and the cylinder's maximum rated operating pressure.

Example: If the cylinder selected is a CC15 (1½ - inch bore):

Actual PSI:	80
Max. PSI:	100
Differential:	20%
20% x 126 in. (maximum stroke) = 25.2 in.	
25.2 + 126 = 151.2 in. (12.6 feet)	

2. If your required stroke length is still more than the increased stroke length determined from option "1.", an automatic tensioner (AT) or multiple tensioners may be required.

For maximum stroke lengths when using auto tensioners, refer to the chart on page CC_22.

NOTE: When using auto tensioners, the cylinder's cables must be proof-loaded and pretensioned before pressure is applied to the AT unit. Refer to Application Guidelines on page CC_36 for proper proof-loading and pretensioning methods.

Auto tensioners are strongly recommended for vertical lifting applications and severe, high-cyclic applications even when the cylinder's stroke is within the maximum stroke length at full manual cable adjustment.

CC: Cable Cylinder Selection Example

The procedure for selection of cable cylinder and magnetically coupled cylinder are very similar. For illustrative purposes, charts for the CC10 model are used in this example.

1. COMPILE APPLICATION REQUIREMENTS

- Available pressure 80 psi
- Weight of load 30 lbs.
- Orientation of load horiz.
- Final velocity* of load 10" per sec
- Stroke length 68"

*2x average velocity, see page 197

2. SELECT CYLINDER SIZE

- Consult the Theoretical Force vs. Pressure charts.
- Cross-reference the load force and

the available operating pressure. In this example a CC07 would accommodate this load at the available PSI.

3. DETERMINE COUPLING FORCE REQUIREMENTS (MG ONLY)

Since we are selecting a cable cylinder we can skip this step.

4. DETERMINE INTERNAL CUSHION CAPACITY (CC ONLY)

- Consult the Cushion Data Chart for the model selected.

In this example the calculated value for the final velocity and the load intersect at the line for the internal cushions capacity. Thus the CC10 will work for this application.

5. DETERMINE THE MAXIMUM STROKE LENGTHS FOR FULL MANUAL CABLE ADJUSTMENT (CC ONLY)

- Consult the chart below left.

In our example we are using 80 PSI, the chart indicates a maximum of 100 PSI, so we can calculate the maximum stroke length with manual adjustment:

$$1.20 \times 20.4" = 24.48"$$

Our stroke length is 68" so it will require the automatic tensioner option.

6. CONSIDER OPTIONS

This application will use Form C dc Reed switches to signal other units in this automated system.

The final configured string will appear as follows:

CCM10SK68.000HIBM2

CABLE CYLINDER MAXIMUM STROKE LENGTHS FOR FULL MANUAL CABLE ADJUSTMENT

MODEL	BORE IN.	MAXIMUM PRESSURE		MAXIMUM STROKE	
		PSI	BARS	IN.	MM

CC: Caliper Disc Brake for Cable Cylinder Selection Guidelines

ADT
MXP
BC2
BC3
BC4
LS
MG
CC
PB
ENGR

DETERMINE THE LOAD CONFIGURATION AND THE HOLDING CAPACITY OF THE BRAKE

The following steps will help determine the adequate stopping time and distance for the cable cylinder

equipped with a caliper disc brake under various conditions and loads.

1. Select the bore size of the cable cylinder based on load to be moved. Determine load pressure. Set regulator at 25% above load pressure (P_c).

2. Calculate the unbalanced cylinder force (F_c) **only** if pressure is applied when braking. If pressure is removed prior to braking, go on to 3.

$$F_c = P_c \times A_c$$

3. Calculate the tangential braking force required. This is (F_{tr}) when pressure is removed prior to braking, or (F_{ta}) when pressure is still applied when braking. Refer to illustrations in Figure 1.

Carefully note conditions:

$$F_{tr} = W \left[\left(\frac{a}{g} - \sin \vartheta \right) - (f \cos \vartheta) \right], \text{ Horizontal or Load rising}$$

$$F_{tr} = W \left[\left(\frac{a}{g} + \sin \vartheta \right) - (f \cos \vartheta) \right], \text{ Load falling}$$

$$F_{ta} = F_c + W \left(\frac{a}{g} - f \right), \text{ Horizontal loads}$$

$$= F_c + W \left[\left(\frac{a}{g} - \sin \vartheta \right) - (f \cos \vartheta) \right], \text{ Incline load rising}$$

$$= F_c + W \left(\frac{a}{g} - 1 \right), \text{ Vertical load rising}$$

In the above expressions (a) can be calculated from:

$$a = \frac{V^2}{2S} \text{ or } \frac{V}{T}, \text{ In./Sec.}^2$$

4. Calculate the tension required in brake side cable at the time of braking.

$$L_{tr} = \frac{F_{tr}}{0.369}, \text{ lbs.}; \text{ Pressure removed while braking}$$

$$L_{ta} = \frac{F_{ta}}{0.369}, \text{ lbs.}; \text{ Pressure applied while braking}$$

NOMENCLATURE

a = Deceleration, in/sec²
 g = Deceleration due to gravity = 386.4 in/sec²
 f* = Coefficient of friction of sliding load
 f_c = Coefficient of friction between cable and sheave
 F_c = Unbalanced cylinder force, lbs.
 F_{ta} = Tangential braking force required with pressure still applied when braking, lbs.
 F_{tr} = Tangential braking force required with pressure removed prior to braking, lbs.
 L_{tr} = Tension in cable of brake side half while braking with pressure removed, lbs.
 L_{ta} = Tension in cable of brake side half while braking with pressure applied, lbs.
 L_{trm} = Maximum tension in cable with pressure removed while braking, lbs.
 L_{tam} = Maximum tension in cable with pressure applied while braking, lbs.
 S = Stopping distance, inches
 T = Stopping time, seconds

V = Velocity of load, in/sec.
 W = Weight of load, lbs.
 W_e = Equivalent Load, lbs.
 W_e = W (Sin ϑ + f cos ϑ)
 ϑ = Angle of inclination
 ($\vartheta = 0^\circ$ for horizontal)
 ($\vartheta = 90^\circ$ for vertical)
 R_s = Root radius of sheave groove, inches
 P_c = Load Pressure, PSI
 A_c = Area of cable cylinder bore, in²
 P_t = Load Pressure, PSI
 A_t = Area of tensioner cylinder, in²
 P_{ba} = Brake pressure setting. Pressure applied while braking, PSI
 P_{br} = Brake pressure setting. Pressure removed while braking, PSI

*Customer must precisely determine coefficient of friction (f), if this value is used.

CC: Caliper Disc Brake for Cable Cylinder Selection Guidelines

Figure 1

5. Calculate tensioner pressure setting, (P_t) based on type of load configuration. See Figure 1 and Table 1

6. Calculate maximum tension in the cable with **pressure removed** prior to braking (L_{trm}) or with **pressure applied** when braking (L_{tam}).

Horizontal Loads:

$L_{trm} = L_{tr} + W_e$, lbs.; Pressure removed prior to braking bidirectional

$L_{tam} = L_{ta}$, lbs.; Pressure applied when braking and load moving toward caliper

$L_{tam} = L_{ta} + 2W_e$, lbs.; Pressure applied when braking and load moving away from caliper.

Vertical or Inclined Loads:

$L_{trm} = L_{tr} + W_e$, lbs.; Pressure removed prior to braking and load rising or falling

$L_{tam} = L_{ta}$, lbs.; Pressure still applied when braking and load rising

7. Carefully check that (L_{trm}) or (L_{tam}) does not exceed 60% of the cable tensile strength*. If they exceed the 60% figure, either stopping time or stopping distance has to be increased. Repeat steps 1- 7.

8. Calculate the brake operating pressure. See Table 1

$P_{br} = .113 [L_{tr} R_s]$, PSI; Pressure removed prior to braking

$P_{ba} = .113 [L_{ta} R_s]$, PSI; Pressure still applied when braking

9. If pressure is removed prior to braking, check to see if brake can hold the load if application is either vertical or inclined.

The brake can hold the load if:

$$.369 L_{tr} \geq W_e$$

*Refer to Cable Specifications in the double-acting cable cylinder section of this catalog for cable tensile strengths.

TC: Track Cable Cylinder Selection Guidelines - All Sizes

PROVIDING LOAD GUIDANCE AND SUPPORT

1 COMPILE APPLICATION REQUIREMENTS

To determine the appropriate Track Cable Cylinder for an application, compile the following information:

- Available pressure (PSI)
- Weight of load (lbs. or kgs.)
- Orientation of load (lbs. or kgs.)
- Velocity of load (in./sec. or mm/sec.)
- Stroke length (in. or mm)

2 SELECT CYLINDER SIZE

- Consult the Theoretical Force vs. Pressure charts.
- Cross-reference the load force (or load weight if force is not known) and the available operating pressure. If the intersection falls below the diagonal line, and if moments do not exceed maximum values listed for that model (see Step 3), the actuator will accommodate the application. If the intersection is above the

diagonal line, a larger cylinder bore size should be considered.

NOTE: Additional force may be required to obtain the necessary acceleration for vertical or horizontal loads.

3 KEEP UNDER MAXIMUM STROKE LENGTH

There are specific maximum stroke lengths for each model.
 TC05: 67.00"
 TC07: 78.00"
 TC10: 78.00"
 TC15: 78.00"

4 DETERMINE NATURE OF LOAD AND THE EFFECT OF BENDING MOMENTS

If the actuator will guide and support a load located directly over the center of carrier, bending moments will not be a factor in the actuator selection. Track Cable Cylinders perform best that way. See the Bending Moments Formulae below if your application requires the load to be away from center of the carrier.

5 DETERMINE THE BEARING ROD LOAD CAPACITY

Determine whether the Load Weight and Stroke Length will be within the load capacity for the bearing rods.

Cross reference the load weight and stroke on the Load Weight vs. Stroke chart for the selected bore size. (Page cc_20, cc_21) If the intersection falls within the curve, the cylinder will accommodate the application requirements. If the intersection falls outside the curve, consult the chart of a larger bore size that will accommodate the required load weight and stroke for your application.

The weight on the bearing rods causes them to bend or deflect slightly over their length. This deflection is increased for longer rods and/or higher weights on the bearing block. For proper operation, rod deflection must not exceed .30 of an inch.

6 DETERMINE INTERNAL CUSHION CAPACITY

- Consult the Cushion Data chart (Cushion Data for Track Cable Cylinders page cc_7 to cc_11) for the model selected. The velocities listed on the cushion charts are final or cushion impact velocities. On applications where internal cushions are to be used, be sure the actual, final or impact velocity is known. If the velocity is not known, use of limit switches with valve deceleration circuits or shock absorbers should be considered.

BENDING MOMENTS Loading Equation Data

MODEL	BORE SIZE	A (in.)	D (in.)	F (lbs.)	G (lbs.)
TC05	1/2"	1.09	1.0	14.00	-
TC07	3/4"	1.09	1.0	14.00	-
TC10	1"	1.09	1.0	14.00	-
TC15	1-1/2"	1.68	2.31	90.00	-

(See MGS Load vs Stroke graph on page MG_6)

Loading Equation Key

- A** = Distance between shaft centers.
- B** = Distance from load center to center of nearest shaft (in.); determined by application.

- L** = Load per shaft (lbs.).
- W** = Payload weight (lbs.).
- D** = Axial distance between center of bearings (in.).

- F** = Max. bearing sliding load (linear bearings) (lbs.).
- G** = Max. bearing sliding load (sintered bronze bearings) (lbs.).

"L" MOMENT

$$L = \frac{W}{2}$$

"Mx" MOMENT

$$L = \frac{WB}{A}$$

"My" / "Mz" MOMENT

$$F \text{ or } G = 2L = \frac{WB}{D}$$

L should be below curve for the corresponding slide on the "Load vs. Stroke" chart (for sintered bronze or linear bearings - Mag Coupled Slides).

CC Cable Cylinder Application Guidelines - All Sizes

1. PROOF-LOADING AND PRETENSIONING CABLES

Once installed, but before putting in service, the cables on the cylinder should be proof-loaded and pretensioned to ensure that they are rigid for the maximum service life of the cylinder.

Proof-loading and pretensioning involve removing the two types of stretch in the cable by adjusting the clevis terminal lock nuts.

- *Proof-loading* – When cables are manufactured, individual wires and strands are laid in position but left slightly loose. When subjected to proof-loading the wires align themselves, tighten and constructional stretch in the cable is eliminated.
- *Pretensioning* – Elastic stretch in cable is inherent in the wire itself. It is removed when subjected to pretensioning.

There are two ways to proof-load and pretension a cylinder's cables — The Torque Method or The Field Method. These two methods are explained at right. Either method may be used.

All cables should be checked periodically from a preventative maintenance standpoint. When installing new cable assemblies proof-load and pretension using these same methods.

THE TORQUE METHOD

1. Tighten the clevis terminal lock nuts equally with a torque wrench to the values listed under Proof-loading torque in the Proof-loading, Pretensioning table below.
2. Let tightened nuts sit for 30 seconds.
3. Loosen the lock nuts to remove tension (but tight enough to eliminate any slack).
4. Re-torque clevis terminal lock nuts equally with a torque wrench to the total pretensioning figures listed in the table below.

PROOF-LOADING AND PRETENSIONING TORQUE OF CABLES								
CC Model	Proof-loading Torque		Pretensioning Torque		Starting Torque of Nuts on Terminals		Total Pretensioning Torque	
CC05	15 in.-lbs.	1.69 N-m	2.5 in.-lbs.	0.28 N-m	10 in.-lbs.	1.13 N-m	12.5 in.-lbs.	1.41 N-m
CC07	15 in.-lbs.	1.69 N-m	2.5 in.-lbs.	0.28 N-m	10 in.-lbs.	1.13 N-m	12.5 in.-lbs.	1.41 N-m
CC10	15 in.-lbs.	1.69 N-m	2.5 in.-lbs.	0.28 N-m	10 in.-lbs.	1.13 N-m	12.5 in.-lbs.	1.41 N-m
CC15	45 in.-lbs.	5.08 N-m	8.0 in.-lbs.	0.90 N-m	20 in.-lbs.	2.26 N-m	28.8 in.-lbs.	3.25 N-m
CC20	115 in.-lbs.	12.99 N-m	46.0 in.-lbs.	5.20 N-m	25 in.-lbs.	2.82 N-m	71.0 in.-lbs.	8.02 N-m
CC25	115 in.-lbs.	12.99 N-m	73.0 in.-lbs.	8.25 N-m	25 in.-lbs.	2.82 N-m	98.0 in.-lbs.	11.07 N-m
CC30	210 in.-lbs.	23.73 N-m	105.0 in.-lbs.	11.86 N-m	25 in.-lbs.	2.82 N-m	130.0 in.-lbs.	14.69 N-m
CC40	210 in.-lbs.	23.73 N-m	187.5 in.-lbs.	21.19 N-m	25 in.-lbs.	2.82 N-m	212.5 in.-lbs.	24.01 N-m
CC50	325 in.-lbs.	36.72 N-m	180.0 in.-lbs.	20.34 N-m	30 in.-lbs.	3.39 N-m	210.0 in.-lbs.	23.73 N-m
CC52	210 in.-lbs.	23.73 N-m	115.0 in.-lbs.	12.99 N-m	25 in.-lbs.	2.82 N-m	140.0 in.-lbs.	15.82 N-m

THE FIELD METHOD

The Field Method simplifies Proof-loading and Pretensioning the cable cylinder by combining the two processes.

1. Block the load some distance from the end of stroke to keep the piston from bottoming.
2. Apply a pressure that is 15% to 20% higher than the actual load pressure.

NOTE: Load pressure is defined as the pressure required to move the load. When the load is stopped externally, before the piston bottoms, the relief valve

or regulator setting becomes the load pressure.

3. Upon pressurizing, one cable will become tight while the other will become slack. Manually adjust out the slack with a wrench on the clevis terminal lock nut.
4. Release the pressure, block the load on the other side and repeat steps 1 through 3. When these steps are done, turn down the regulator pressure to the normal operating pressure and remove the block.

3. LUBRICATION GUIDELINES

All Tolomatic cable cylinders require internal lubrication unless specified. To ensure maximum cylinder life, the following guidelines should be followed.

• Filtration

We recommend the use of dry, filtered air in our products. "Filtered air" means a level of 10 Micron or less. "Dry" means air should be free of appreciable amounts of moisture. Regular maintenance of installed filters will generally keep excess moisture in check.

• External Lubricators

External lubrication should be utilized for maximum service life of pneumatic cable cylinders.

Lubrication *must be maintained* in a constant supply or the results will be a dry cylinder prone to premature wear.

Oil lubricators, (mist or drop) should supply a minimum of 1 drop per 20 standard cubic feet per minute to the cylinder. As a rule of thumb, double that rate if water in the system is suspected. Demanding conditions may require more lubricant.

We recommend a **non-detergent, 20cP @ 140°F** 10-weight lubricant. Optimum conditions for standard cylinder operation are **+32° to +125°F (+0° to 51.6°C)**.

• Sanitary environments

Oil mist lubricators must dispense "Food Grade" lubricants to the air supply. Use fluids with **ORAL LD50 toxicity ratings of 35 or higher** such as **Multitherm® PG-1 or equivalent**. Demanding conditions can require a review of the application.

Application Guidelines

The following conditional statements are intended as general guidelines for use of Tolomatic actuators. Since all applications have their own specific operating requirements, consult Tolomatic, Inc. or your local Tolomatic distributor if an application is unconventional or if questions arise regarding the selection process.

CUSHION NEEDLE ADJUSTMENT (BC2, BC3, BC4, CC, SA, DP, TC ONLY)

Adjust the cushion needles in the cylinder heads carefully to obtain a smooth, hesitation free deceleration for your particular application. If there are questions on proper adjustment, please consult Tolomatic, Inc.

LUBRICATION GUIDELINES

All Tolomatic actuators (except Cable Cylinders) are prelubricated at the factory. To ensure maximum actuator life, the following guidelines should be followed.

• Filtration

We recommend the use of dry, filtered air in our products. "Filtered air" means a level of 10 Micron or less. "Dry" means air should be free of appreciable amounts of moisture. Regular maintenance of installed

filters will generally keep excess moisture in check.

• External Lubricators (optional)

The factory prelubrication of Tolomatic actuators will provide optimal performance without the use of external lubrication. However, external lubricators can further extend service life of pneumatic actuators if the supply is kept constant.

Oil lubricators, (mist or drop) should supply a minimum of 1 drop per 20 standard cubic feet per minute to the

cylinder. As a rule of thumb, double that rate if water in the system is suspected. Demanding conditions may require more lubricant.

If lubricators are used, we recommend a non-detergent, 20cP @ 140°F 10-weight lubricant. Optimum conditions for standard cylinder operation are +32° to +150°F (+0° to 65.5°C).

NOTE: Use of external lubricators may wash away the factory installed lubrication. External lubricants must be maintained in a constant supply or the results will be a dry actuator prone to premature wear.

• Sanitary Environments

Oil mist lubricators must dispense "Food Grade" lubricants to the air supply. Use fluids with ORAL LD50 toxicity ratings of 35 or higher such as Multitherm® PG-1 or equivalent. Demanding conditions can require a review of the application.

FINAL VELOCITY CALCULATION

Velocity calculations for all rodless cylinders need to differentiate between final velocity and average velocity. For example: Stroking a 100-inch BC3 model in one second yields an average velocity of 100 inches per second. To properly determine the inertial forces for cushioning, it is important to know the

final (or impact) velocity. Rodless cylinders accelerate and decelerate at each end of the stroke. Therefore this acceleration must be considered (see diagram).

If final (or impact) velocity cannot be calculated directly, a reasonable guideline is to use 2 x average velocity.

The above example describes a double-acting cable cylinder with seals of Viton® material, a standard aluminum tube, magnet, 1.5-inch bore, and a stroke of 125.25 inches. Options are a 3-ported head with auto tensioner on right end, a 3-ported head on the left end and two Form A (normally open) reed switches.

Boxes above represent the number of fields available for each section and not all of them will be used in every application. Omit empty boxes when you construct your configured order. For the above example, the order string as it is typed would appear as follows: **CCVM15SK125.25HJHGRT2XA.XB.**

1. CYLINDER MODEL

Enter:

- CC** for double-acting cable cylinder
- SA** for single-acting cable cylinder
- DP** for double purchase cable cylinder
- TC** for track cable cylinder

2. SEALS OF VITON® MATERIAL

Enter:

- V** if VITON® seals are desired, or leave blank

3. TUBING

Enter:

- Blank** for standard aluminum tube
- S** for steel tube

Note: Steel tubing is not available on CC05, CC07 or CC50 models.

Switches cannot be used with steel tubing.

4. SWITCH MAGNET

Enter:

- M** if switch magnet is required, or leave blank

Note: Magnet will increase dead length. (See page cc_29)

Increase does not apply to TC Models.

5. BORE SIZE

Enter:

- | | |
|-----------------------------|------------------------------------|
| 05 for .5-inch bore | 25 for 2.50-inch bore |
| 07 for .75-inch bore | 30 for 3-inch bore |
| 10 for 1-inch bore | 40 for 4-inch bore |
| 15 for 1.5-inch bore | 50 for 5-inch bore |
| 20 for 2-inch bore | 52 for 2-inch bore (500PSI) |

6. STROKE LENGTH

Enter:

SK then required stroke length in **inches**:

Example: **SK125.25** for 125.250-inch stroke

Note: Strokes over 284 inches require Tube Couplers, please consult factory for lead times. (max. stroke varies by model and bore size, see *dimensions page for specification*)

7. HEAD OPTIONS

Single-ported heads are standard on all cylinders.

Enter head options for “END #1” (right end) and/or “END #2” (left end) of the cylinder:

- HG*+** for 3-ported head
- HI** for 1-inch auto tensioner assembly
- HJ+** for 1-inch auto tensioner assembly with 3-ported head
- HK** for 2-inch auto tensioner assembly
- HL+** for 2-inch auto tensioner assembly with 3-ported head
- HM**** for caliper disc brake assembly
- HN**+** for caliper disc brake assembly with 3-ported head

* Only head option available for single-acting cylinders.

** Auto tensioner assembly required on one end of the cylinder.

+ Cushions are removed on all 3-ported heads.

8. SWITCH TYPE

NOTE: “M” must be selected in (4.) before selecting a switch type. Enter:

- BT** for Form C Reed Switch 5-meter lead
- BM** for Form C Reed Switch 5-meter lead Quick-disconnect
- RT** for Form A Reed Switch 5-meter lead
- RM** for Form A Reed Switch 5-meter lead Quick-disconnect
- CT** for AC Triac Reed Switch 5-meter lead
- CM** for AC Triac Reed Switch 5-meter lead Quick-disconnect

Then enter:

The number of Switches required.

9. EXTRA CABLE

Enter:

- XA** for extra cable beyond standard in inches
- XB** for extra cable beyond standard in inches

REPAIR KIT ORDERING

Example: RKCCMO7SK25

Where **RK** is the Repair Kit code, **CCM** is the Cable Cylinder Code, **07** is the .75" bore and **SK 42.5** indicates a stroke length of 42.5 inches.

Cable Assemblies and Repair Kits for cable cylinder with Viton Seals: Modify Repair Kit Part number to include a "V" after the model style and before the bore size.

(ex. **CACCV10SK_** or **RKTCVM15SK_**)

¹ Cable Assemblies contain: one Cable Assembly (specify stroke).

² Repair Kits contain: two Cable Assemblies (specify stroke) and all wearable seals required to rebuild the cylinder.

SWITCH KITS³

To order retrofit switch and hardware kits:

Enter: **SW** then the model and bore size, and type of switch needed.

Example: **SWCCM10BT**

Where **SW** is the Switch Kit code, **CCM** is the Cable Cylinder code, **10** is the 1" bore, and **BT** is the switch code for a Form C Reed Switch.

³ Switch Kits contain: one reed switch and mounting hardware.

Field Retrofit Switches

- Replacing an existing switch on actuator manufactured AFTER 7/1/97:
Order from part numbers on table below.
- Replacing an existing switch on actuator manufactured BEFORE 7/1/97:
Order via configurator code on page CC_39.
- Adding switch to an actuator that has not had a switch in the past:
Order via configurator code on page CC_39.

3600-9082	Switch, Reed, Form A, 5m Wire
3600-9083	Switch, Reed, Form A, Male Connector
3600-9084	Switch, Reed, Form C, 5m Wire
3600-9085	Switch, Reed, Form C, Male Connector
3600-9086	Switch, Triac, 5m Wire
3600-9087	Switch, Triac, Male Connector
2503-1025	Connector, Female, 5m

(NOTE: If replacing a quick-disconnect switch manufactured before 7-1-97 it will also be necessary to replace or rewire the female-end coupler with the in-line splice. See page CC_28.)

PB & PB2 Rod Cylinder Slides - All Sizes

PERFORMANCE

THEORETICAL FORCE vs PRESSURE

AVAILABLE STROKE LENGTHS

PB POWER-BLOCK

ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

DURABLE BEARING

COMPOSITE BEARINGS

- Thin profile allows use of oversize guide rods
- Best choice for impact use or high contaminant environments

DOVETAIL SLOTS

- For easy switch mounting

INTERNAL BUMPER

- Made of urethane composite to prolong cylinder life and reduce noise

NICKEL-PLATED SHAFTS

- Shafts up to 0.625" diameter

DURABLE DESIGN

- Tough, lightweight extruded aluminum in a low profile package

MOUNTING FLEXIBILITY

- Threaded holes for base or side mounting

PLATED STEEL TOOLING PLATE

- Threaded bolt thru holes for tooling plate mounting

OPTIONS

STOP COLLAR / BUMPER KIT

- Includes 2 stop collars and 1/4" thick polyurethane external bumpers to help absorb impact shock

DUAL TOOLING PLATE

- Added flexibility for many applications

SWITCHES

- Available in Reed, Hall-effect and Triac
- 15ft. cable with flying leads; available with quick-disconnect couplers

PB Power-Block Rod Cylinder Slide - 06, 10 Sizes

PERFORMANCE

THEORETICAL FORCE vs PRESSURE

MAX. LOAD WEIGHT vs STROKE LENGTH

BENDING MOMENTS

LOAD WEIGHT vs VELOCITY (USING INTERNAL BUMPERS)

FORCE VS. PRESSURE

Force vs Pressure performance data applies to models with composite bearings.

MAX. LOAD WEIGHT vs STROKE LENGTH

Do not exceed Max. Load curve. Max. Load for composite bearings is based on 200 million linear inches of travel.

BENDING MOMENTS

Max. Moment for composite bearings is based on 200 million linear inches of travel.

LOAD VS VELOCITY

Do not exceed Max. Load curve. Max. Load for Power-Block is based on 200 million linear inches of travel.

ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

HIGH PRESSURE CAPABLE

- Designed for pressures up to 150 PSI (10.3 bar) with a 10,000,000 cycle rating

INTERNAL BUMPERS

- Made of urethane composite to prolong cylinder life and reduce noise

PISTON MAGNET

- Piston magnet is a standard feature allowing sensor mounting whenever required

LARGE SHAFTS

- Shafts up to 1.25" diameter

DURABLE DESIGN

- Tough, lightweight extruded aluminum in a low profile package

DURABLE BEARING OPTIONS

LINEAR BALL BEARINGS

- Low friction, long life
- Best tooling plate accuracy

COMPOSITE BEARINGS

- Thin profile allows use of oversize guide rods
- Best choice for impact use or high contaminant environments

PLATED STEEL TOOLING PLATE

- Threaded bolt thru holes for tooling plate mounting

MOUNTING FLEXIBILITY

- T-slots and threaded holes for base mounting

OPTIONS

SWITCHES

- Available in Reed, Hall-effect and Triac
- 15ft. cable with flying leads; available with quick-disconnect couplers

IMPACT LOADING

(Composite Bearings ONLY)

$$KE = \frac{1}{2} \frac{W}{g} v^2$$

KE = Energy

w = Weight in Lbs.

g = 32.2 Ft./sec.²
(gravitational constant)

v = Ft./sec. (velocity)

In applications such as conveyor stops impact loading may be a factor. The table below gives the maximum KE energy for each of the PB2 models. Use the above equation to determine the KE for your application. Your result should not exceed the maximum KE for the PB2 model you select.

	BORE SIZE		MAX. "KE"	
	in	mm	in-lbs	N-m
08	0.500	12.7	1.08	0.12

PB & PB2 Switches - All Sizes

SWITCHES

There are 10 sensing choices: DC reed, form A (open) or form C (open or closed); AC reed (Triac, open); Hall-effect, sourcing, PNP (open); Hall-effect, sinking, NPN (open); each with either flying leads or QD (quick disconnect). Commonly used to send analog signals to PLC (programmable logic controllers), TLL, CMOS circuit or other controller device. These switches are activated by the actuator's magnet.

Switches contain reverse polarity protection. QD cables are shielded; shield should be terminated at flying lead end.

If necessary to remove factory installed switches, be sure to reinstall on the same side of actuator with scored face of switch toward internal magnet.

Rod Cylinder Slide Selection Guidelines - PB & PB2 - All Sizes

PROVIDING LOAD GUIDANCE AND SUPPORT

The process of selecting a load bearing actuator for a given application can be complex. **It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application.** The following overview of the selection guidelines are for educational purposes only.

1 COMPILE APPLICATION REQUIREMENTS

To determine the appropriate Tolomatic rod cylinder slide for an application, compile the following information:

- Available pressure (PSI)
- Weight of load (lbs. or kgs.)
- Orientation of load (lbs. or kgs.)
- Velocity of load (in./sec. or mm/sec.)
- Stroke length (in. or mm)

Use the Application Data Worksheet on page PB_15

2 SELECT ROD CYLINDER SLIDE SIZE

- Consult the Theoretical Force vs. Pressure graphs

NOTE: Graphs for PB are on pages PB_4 to 5 and PB2 are on pages PB_9 to 10.

- Cross-reference the load force (or load weight if force is not known) and the available operating pressure. If the intersection falls below the diagonal line, and if moments do not exceed maximum values listed for that model (see Step 4) the Tolomatic rod cylinder slide will accommodate the application. If the intersection is above the diagonal line, a

larger rod cylinder slide bore size should be considered.

NOTE: Additional force may be required to obtain the necessary acceleration for vertical or horizontal loads.

3 DETERMINE EFFECT OF LOAD VS. EXTENDED LENGTH

- Consult the Max. Load Weight vs Stroke Length Chart for the Tolomatic rod cylinder slides.
- Cross-reference the load weight and the extended length. If the intersection falls below the maximum load line, and if moments do not exceed maximum values listed for that model (see Step 4), the rod cylinder slide will accommodate the application. If the intersection is above the diagonal line, a larger rod cylinder slide bore size should be considered.

4 DETERMINE NATURE OF LOAD AND THE EFFECT OF BENDING MOMENTS

If the rod cylinder slide will guide and support a load located directly on center of the tooling plate, bending moments will not be a factor in the rod cylinder slide selection.

NOTE: the maximum load weight "W" must not exceed the capacity limits of the rod cylinder slide selected.

- Bending Moments

For off center or side loads, determine the distance from the center of mass of the load to the center of the tooling plate. This measurement is needed to calculate the torque for bending moments.

Should the resulting maximum bending moment exceed figures indicated on the chart, a larger rod cylinder slide should be considered.

5 DETERMINE INTERNAL BUMPER CAPACITY [POWER-BLOCK2 ONLY]

- Consult the Load vs Velocity Data Chart for the Power-Block model selected. The velocities listed on the charts are final or bumper impact velocities.
- Cross-reference the final velocity and weight of the load. If the intersection is below the diagonal lines, the internal bumpers on the Power-Block2 may be used. If the point falls above the dashed diagonal line or if the velocity is not known, select a larger rod cylinder slide. On high-cyclic applications, use of external stops is strongly recommended.

6 CONSIDER OPTIONS

- Switches— dc Reed, Hall-effect, or ac Triac - (All Models)
- Bumpers and Stop Collars - (Power-Block)
- Dual Tooling Plate (Power-Block)

Application Guidelines

The following conditional statements are intended as general guidelines for use of Tolomatic actuators. Since all applications have their own specific operating requirements, consult Tolomatic, Inc. or your local Tolomatic distributor if an application is unconventional or if questions arise regarding the selection process.

LUBRICATION GUIDELINES

All Tolomatic actuators (except Cable Cylinders) are prelubricated at the factory. To ensure maximum actuator life, the following guidelines should be followed.

• Filtration

We recommend the use of dry, filtered air in our products. “Filtered air” means a level of 10 Micron or less. “Dry” means air should be free of appreciable amounts of moisture. Regular maintenance of installed

filters will generally keep excess moisture in check.

• External Lubricators (optional)

The factory prelubrication of Tolomatic actuators will provide optimal performance without the use of external lubrication. However, external lubricators can further extend service life of pneumatic actuators if the supply is kept constant.

Oil lubricators, (mist or drop) should supply a minimum of 1 drop per 20 standard cubic feet per minute to the

cylinder. As a rule of thumb, double that rate if water in the system is suspected. Demanding conditions may require more lubricant.

If lubricators are used, we recommend a non-detergent, 20cP @ 140°F 10-weight lubricant. Optimum conditions for standard cylinder operation are +32° to +150°F (+0° to 65.5°C).

 NOTE: Use of external lubricators may wash away the factory installed lubrication. External lubricants must be maintained in a constant supply or the results will be a dry actuator prone to premature wear.

• Sanitary Environments

Oil mist lubricators must dispense “Food Grade” lubricants to the air supply. Use fluids with ORAL LD50 toxicity ratings of 35 or higher such as Multitherm® PG-1 or equivalent. Demanding conditions can require a review of the application.

FINAL VELOCITY CALCULATION

Velocity calculations for all rodless cylinders need to differentiate between final velocity and average velocity. For example: Stroking a 100-inch BC3 model in one second yields an average velocity of 100 inches per second. To properly determine the inertial forces for cushioning, it is important to know the

final (or impact) velocity. Rodless cylinders accelerate and decelerate at each end of the stroke. Therefore this acceleration must be considered (see diagram).

If final (or impact) velocity cannot be calculated directly, a reasonable guideline is to use 2 x average velocity.

PART NUMBER ORDERING		CONFIG. CODE ORDERING
No Mounting Hardware or FE conn. included		Mounting Hardware & FE conn. included
PART NO.	DESCRIPTION	CODE
3600-9084	Switch Only, Reed, Form C, 5m	BT
3600-9085	Switch Only, Reed, Form C, Male Conn.	BM
3600-9082	Switch Only, Reed, Form A, 5m	RT
3600-9083	Switch Only, Reed, Form A, Male Conn.	RM
3600-9086	Switch Only, Triac, 5m	CT
3600-9087	Switch Only, Triac, Male Conn.	CM
3600-9090	Switch Only, Hall-effect, Sinking, 5m	KT
3600-9091	Switch Only, Hall-effect, Sinking, Male Conn.	KM
3600-9088	Switch Only, Hall-effect, Sourcing, 5m	TT
3600-9089	Switch Only, Hall-effect, Sourcing, Male Conn.	TM
2503-1025	Connector (Female) 5 meter lead	

NOTE: When ordered by Config. Code Female connector & all mounting hardware is included

Service Parts Ordering NOTES:

- 1 One Each
- 2 Kit includes: 2 (two) stop collars and 2 (two) 1/4" thick polyurethane external bumpers to help absorb impact shock

Switch Ordering NOTES:

To order field retrofit switch and hardware kits for all Tolomatic actuators: SW (Then the model and bore size, and type of switch required)

Example: SWPB10RT

(Hardware and Form A Reed switch with 5 meter lead for 0.625" bore PB Rod Cylinder Slide)

Replacing an existing switch on an actuator manufactured AFTER 7-1-1997

Order using PART NUMBER in table above

Replacing an existing switch on an actuator manufactured BEFORE 7-1-1997

Order using CONFIGURATOR CODE in table above

If replacing a quick-disconnect switch on an actuator manufactured BEFORE 7-1-1997 it will also be necessary to replace or require the female-end coupler with the in-line splice (see page PB_13)

Glossary

A

ACCELERATION

The change in velocity as a function of time. Acceleration usually refers to increasing velocity, and deceleration to decreasing velocity.

ACCURACY

A measure of the difference between expected position and actual position.

ACTUATOR

A mechanism for moving or controlling something indirectly instead of by hand.

ADJUSTABLE SHOCK ABSORBERS

Used on BC2 and BC3 band cylinders to decelerate heavy loads at high velocities. Tolomatic offers light and heavy duty shock absorbers. The sizing and selection software will automatically choose the correct either light duty or heavy duty as required. When shock absorbers are used on the cylinder internal cushions are not operational. Note: Shock absorber is most effective when stopping load at its center of gravity.

AMBIENT TEMPERATURE

The temperature of the cooling medium, usually air, immediately surrounding the motor or another device.

ANODIZING

Protective treatment for aluminum that involves subjecting the metal to electrolytic action in a chemical bath, to create a protective film of aluminum oxide with a very smooth finish. The process is similar to that of hardcoating, but the latter involves the use of a different, more complex chemical bath and results in a thicker, rougher, extremely brittle coating of aluminum oxide.

AUXILIARY CARRIER

An option for band cylinders or linear slides that increases the load capacity of the cylinder as well as increasing the capacity

of bending moment about the Y axis. Note: internal cushion will not work when auxiliary carrier ordered without piston, it will be necessary to add external shock absorbers.

AVERAGE VELOCITY

Velocity calculations for all rodless cylinders need to differentiate between final velocity and average velocity. For example: Cycling a 100 inch BC3 model in one direction in one second yields an average velocity of 100 inches per second. To properly determine the inertia forces for cushioning, it is important to know the final (or impact) velocity. Rodless cylinders accelerate and decelerate at each end of the stroke. Therefore this acceleration must be considered. If final velocity cannot be calculated directly, a reasonable guideline is to use 2X average velocity.

AXIAL LOADING

A load with a force directed along an axis, such as a shaft.

B

BALL BEARING

A bearing where the journal turns upon loose, hardened steel balls that roll easily in a race.

BAND CYLINDER

A the name for a rodless cylinder using Tolomatic's unique band retention system. Band cylinders feature a central slot. A band-type cylinder uses a bracket directly mounted to the cylinder piston to transmit force. The bracket passes between two bands which then seal the cylinder. The inner sealing band creates a tight metal to metal seal with the internal diameter of the cylinder bore. An outer dust band keeps dust and grit away from the sealing band. Elastomer strips provide a positive, non-magnetic lock. Tolomatic models include: BC2, BC3, BC4

BAR

The SI Metric unit of pressure equal to one million Dynes per square centimeter. The bar is used to measure both pneumatic and hydraulic pressure. One Bar is equal to 14.5038 pounds per square inch. It is also nearly equivalent to one atmosphere of pressure.

BASE MOUNT

Base mounting linear slides may be accomplished by fastening directly to "T" slot nuts provided in the base of the slide or by using the base mounting.

BC2 BAND CYLINDER

The second generation of the original band cylinder, introduced in 1986.

BC3 BAND CYLINDER

This band cylinder, introduced in 1995, incorporates a ball bearing system in the carrier for high performance.

BC4 BAND CYLINDER

Introduced in 1996, the BC4 is an economical choice for supported loads.

BENDING MOMENT

Equivalent torque produced by a force displaced by a known distance from the carriage.

BREAKAWAY

The minimum amount of force or pressure required to cause the initial movement of a given device such as a cable cylinder piston, a brake piston, or a rotary actuator through a full stroke.

BRITISH THERMAL UNIT (BTU)

The amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit.

BUNA-N

A widely used copolymer (artificial rubber) used for making seals. Buna-N seals should never be used with automotive brake fluid.

C

CABLE

A wire rope made of twisted strands of material. In the case of cable cylinders, cables are made of strands of galvanized steel which are twisted together in bundles of seven strands each. These bundles, in turn, are twisted around each other. The resulting cable is coated with an extruded nylon covering.

CABLE ASSEMBLY

A sub-assembly consisting of the cable ferrules, terminals and gland seals.

CABLE CYLINDER

A rodless cylinder using cables to transmit force from a piston.

CABLE CYLINDER REPAIR KIT

A sub-assembly consisting of two cable assemblies and the internal seals (two piston seals, two cushion seals and two tube-sealing O-rings) required to keep a cable cylinder operational.

CALIPER DISC BRAKE

A form of brake, used to retard, stop or hold action. The brake is called a "caliper" because it is mounted over a rotating disc to which it applies a friction member (puck) to slow, stop or hold the disc.

CARRIER

Attached to band cylinder or linear slide with bearing system the carrier supports and moves the load. Tolomatic options include: Auxiliary carrier, Dual 180 carrier (BC3 only), Long Carrier (BC4 only).

CENTER OF GRAVITY

(Center of Mass) The point at which the entire weight of a body may be considered as concentrated so that if supported at this point the body would remain in equilibrium in any position.

CLEVIS

The name given to the U-shaped cable connecting bracket on a Tolomatic cable cylinder.

Glossary

COEFFICIENT OF FRICTION

The measurement of friction of one object sliding across another. Symbolized by the Greek letter Mu (μ) it is defined as the tangent of the angle of repose of a static body. The coefficient is expressed in decimal values (clean iron on clean iron is 1.0, while metal on solid rubber may range from 1.0 up to 4.0). When objects are wet, the coefficient of friction decreases.

CONFIGURATOR

Name given to the software that uses the configuration string to give instructions to the factory with correct specifications to create your built-to-order actuator.

CONFIGURATOR STRING

A series of code letters and numbers that Tolomatic uses to create built-to-order actuators.

CONSTRAINT

Guided and supported in a particular direction, through the use of an external guidance and bearing system.

CUSHION

A means of slowing down a cylinder piston at the end of its stroke by using an exhaust port with an orifice small enough to restrict the velocity at which the pressure fluid is exhausted.

CUSTOM PRODUCTS

These products don't resemble any of the products seen in the Tolomatic catalogs. Tell us your performance requirements, we can build a custom product for you.

CYCLE

- 1) A sequence of operations that is repeated regularly.
- 2) The time it takes for one such sequence to occur.

CYCLE RATE

The total number of times a complete motion is made from start and return to start in a specific period of time.

D

DEAD LENGTH

Dead length is the part of the band cylinder or linear slide required for mounting and mechanisms. The overall length of a band cylinder or linear slide is the stroke length plus the dead length.

DECELERATION

The opposite of acceleration. Deceleration means diminished velocity or slowing down.

DEFLECTION

A measurement of the amount of bend under the weight of a load, such as that to which a load-supporting rod or cable is subject.

DIE-CAST

A metal-forming process similar to injection-molding for plastic. In Die-Casting, molten metal (usually aluminum) is injected into a mold under pressure.

DOUBLE-ACTING CABLE CYLINDER

Cable cylinder that applies equal force in two directions.

DOUBLE-PURCHASE CABLE CYLINDER

Cable cylinder that uses additional cable and pulleys to double the velocity and stroke of cable cylinders.

DUAL 180 CARRIER

Option for the BC3 that gives greater bending moments without using a larger actuator.

DUAL MAGNET

Option for BC2 with two magnets, one on each side of the carrier.

DUST BAND

Part of Tolomatic's unique band retention system, the external band.

E

EXTERNAL CUSHIONS

Shock absorbers of some sort used to decelerate the load on a rodless cylinder in cases

where the load is too heavy to make use of the cylinder's internal cushions.

EXTERNAL STOPS

Stops used on the outside of a vane-type rotary actuator to limit the rotation of the unit short of the unit's full cycle.

F

FINAL VELOCITY

Velocity calculations for all rodless cylinders need to differentiate between final velocity and average velocity. For example: Cycling a 100 inch BC3 model in one direction in one second yields an average velocity of 100 inches per second. To properly determine the inertia forces for cushioning, it is important to know the final (or impact) velocity. Rodless cylinders accelerate and decelerate at each end of the stroke. Therefore this acceleration must be considered. If final velocity cannot be calculated directly, a reasonable guideline is to use 2X average velocity.

FLOATING MOUNT (BAND CYLINDERS, MAGNETICALLY COUPLED CYLINDERS)

An option for use in applications where the load is not guided and supported by the Tolomatic actuator, or when compensating for nonparallelism.

FOOT MOUNT

A mounting plate that attaches a cylinder head to mount the cylinder to a flat surface at a 90° angle.

FORCE

An agency or influence that if applied to a free body results chiefly in an acceleration of the body and sometimes in elastic deformation and other effects.

4 PORTED HEAD

The BC2 features standard 3 ported heads but can be ordered with an additional 4th port in the underside of the head for additional mounting

flexibility.

FRICTION

Resistance to relative motion between two bodies in contact, such as steel sliding on steel.

H

HALL-EFFECT D.C. SWITCH

A magnetically-controlled transistor switch controlling DC power. It has no moving parts and theoretically unlimited contact life.

HEAD

A metal component mounted at each end of a rodless pneumatic cylinder. With a cable cylinder, the head has a pulley, ports, mounting holes and provides sealing. On a Band Cylinder, the head provides tube sealing, fluid ports and mounting holes.

HUB

A means of attaching a sprocket, pulley or disc to a shaft.

I

INCH-POUND

A unit of measure of torque. It is derived from a given force in pounds acting at a given radius in inches (pounds multiplied by inches = inch-pounds). An inch-pound is 1/12th of a foot-pound. Inch-pounds may be converted to the SI Metric equivalent of Newton-meters by multiplying them by 0.1129848. Newton-meters may be converted to inch-pounds by multiplying them by 8.850748.

INERTIA

A measure of an object's resistance to a change in velocity. The larger an object's inertia, the larger the torque required to accelerate or decelerate it. Inertia is a function of an object's mass and shape.

K

KEY

A demountable machine part,

Glossary

which, when assembled into a keyseat, provides a positive means for transmitting torque between two other machine parts.

KEYWAY

An axially-located groove in the length of a shaft along which a key may be located.

KINETIC ENERGY

The ability to do work based on motion. It is found by multiplying half the mass by the square of the velocity.

L

LIMIT SWITCH

A switch that is actuated by some part or motion of a machine or equipment to alter the electrical circuit associated with it.

LINEAR SLIDE

A rodless cylinder using the same unique band retention system as the band cylinder. The Linear Slide uses a wider extrusion with steel shafts and bearings for additional load support. Tolomatic model: LS

LOAD

A mass or weight supported by the carrier (rodless cylinders) or tooling plate (rod cylinder slides).

LONG CARRIER

An option available for the BC4 the long carrier increases the My and Mz moment load capacity. It also gives a larger mounting surface and virtually eliminates chatter for vertical cantilever loads.

M

MAGNETICALLY COUPLED ACTUATOR

Rodless cylinder and slides featuring a magnetic couple between the piston and moving carrier.

MAGNETIC COUPLING FORCE

The force created between the piston magnets and the moving carrier (measured in pounds).

MODIFIED STANDARD PRODUCTS

Tolomatic can easily accommodate your special needs. Our standard products are often customized with extra mounting holes, different materials and other requests. This can often be done within our normal 5 day production time. We welcome modifications as well as completely new custom products.

N

NEEDLE BEARING

A type of roller bearing where the journal turns on small-diameter, hardened needle-like rollers which roll easily in a metal race.

O

O-RING

A ring of synthetic rubber with a circular cross-section, used as a gasket or seal.

P

PARALLEL PORT

Metric versions of the BC2, BC3, BC4 and LS have the choice of parallel port and taper port.

PISTON

A sliding component moved by fluid pressure. It usually consists of a short, solid metal cylinder within a cylindrical vessel in which it moves back and forth.

PORT

In pneumatic units, the area to make connection to air lines that supply power to the actuator. In electrical units: a connecting unit between a data link and a device.

POUNDS PER SQUARE INCH OR PSI

A measurement of pressure in the U.S. customary system. By way of comparison, the weight of the atmosphere (one atmosphere) is 14.7 pounds per square inch, at sea level. It is used to express pressure in both pneumatic and

hydraulic-powered systems. In the SI Metric system, pressure is measured in Bars. To convert PSI to Bars, take the PSI figure and multiply it by 0.0689476.

PRESSURE

The force or thrust exerted over a surface divided by its area. In the U.S. customary system, pressure is expressed as Pounds per Square Inch (PSI). In the SI Metric system, it is expressed in Bars.

PROXIMITY SENSOR

An LED-equipped device for sensing end-of-stroke on cylinder slides. Proximity sensors supply either a sourcing signal or a sinking signal to a device such as a programmable logic controller.

PULLEY

A sheave or small wheel with a grooved rim used with a cable cylinder to change the direction and point of application of the pulling force generated by the cylinder's piston.

Q

QUAD RING

A sealing ring of synthetic rubber which has 4 sealing lobes and is capable of sealing in two directions.

R

REED SWITCH

Tolomatic's Form A Reed Switch is an LED-equipped 0.5 ampere switch consisting of ferromagnetic blades brought into contact when a magnet passes nearby. Reed switches are used for signalling position only.

RELATIVE HUMIDITY

A ratio that indicates the amount of water vapor in the air. It is usually expressed as a percentage. At any temperature, it is the amount of water vapor in the air, divided by the amount that would be present at saturation.

RMS (ROOT MEAN SQUARE)

An industry-accepted standard

for measuring the smoothness of a surface finish. Under a microscope, all surface finishes have peaks and valleys. The more peaks and valleys, the rougher the finish and the higher the RMS value. The smaller the RMS number, the smoother the finish.

ROCKWELL

Industry-accepted standard for definition of hardness.

ROD CYLINDER

A cylinder using a rod attached to its piston to transmit force. Tolomatic models include: RCS and PB2.

RODLESS CYLINDER

An actuator that contains the stroke within the cylinder itself. Tolomatic models include: BC2, BC3, BC4, LS, MG, MGS, CC, SA, DP, and TC.

ROLLER BEARING

An anti-friction device consisting of a journal which rests on free-rolling, hardened cylinders in a race.

S

SCHEMATIC

A diagram of a circuit in which symbols illustrate circuit components.

SEAL

An object used to retain air pressure, water, hydraulic fluid or oil in a vessel. In the Tolomatic product line, seals are made of an elastomer, which is any of a variety of synthetic rubber compounds.

SEALING BAND

The stainless steel strap which is part of Tolomatic's unique band retention system, the internal band.

SHIELDING

The practice of confining the electrical field around a conductor to the primary insulation of the cable by putting a conducting layer over and/or under the cable insulation. (External shielding is a conducting layer on the outside of the cable insulation.)

ABT

MXP

BC2

BC3

BC4

LS

MG

CC

PB

ENGR

Glossary

Strand or internal shielding is a conducting layer over the wire insulation.)

SHOCK ABSORBERS

A self contained hydraulic device commonly used on rodless cylinders, rodless slides and rod cylinder slides to decelerate heavy loads at high velocities.

SIGNAL

The event, phenomenon, or electrical quantity that conveys information from one point to another.

SINGLE-ACTING CABLE CYLINDER

Cable cylinder that applies force in one direction and uses gravity (generally) to return to home position.

SINGLE END PORTING

Single end porting simplifies air hook up, allows running air lines to just one end of the actuator. Unless otherwise specified single end porting is factory installed on the right side of the actuator. Available for the BC3 and BC4.

SNAP-IN SEAL®

A unique method of installing seals in cable cylinder heads without using tools. It includes a plastic washer, which, when pulled into a cable cylinder head cable port, snaps into a groove and holds the seal arrangement in place.

SOLID STATE DEVICES

Electronic components that control electron flow through solid materials (e.g., transistors, diodes, or integrated circuits).

STROKE LENGTH

Stroke length is the distance that the carrier and its load will move on the band cylinder or linear slide.

SURGE

A transient variation in the current or potential at a point in the circuit.

SWITCH MAGNETS

Located on the carrier or

piston magnets are needed for switches to sense position of carrier. On the BC3 and BC4 the switch magnet is a standard feature, attached to the piston. On the BC2 and LS the switch magnet is only included if switch is ordered. Magnets are easily inserted into carrier for field retrofitting.

SWITCH MAGNETS (DUAL)

The BC2 optionally can have dual switch magnets, one on each side of the carrier.

SWITCHES

For signaling position Tolomatic has 5 different switches available. These switches are available with a 5 meter lead, or with a quick-disconnect connector and 5 meter lead.

SYSTEM

A collection of units combined to work as a larger integrated unit having the capabilities of all of the separate units.

T

T-NUTS

For intermediate support, tube support brackets can be mounted to the BC2, BC3, and BC4 models. For the BC3 and BC4 the T-Nuts, that are needed for the brackets, must also be ordered.

TAPER PORT

Metric versions of the BC2, BC3, BC4 and LS have the choice of parallel port and taper port.

TENSILE STRENGTH

The greatest longitudinal stress a substance can bear without permanent deformation.

TERMINAL

A threaded device attached to the end of a cable cylinder assembly for convenience in making connections and adjustments. One terminal is attached to the piston, while the other is attached to the bracket (clevis).

TOLERANCE

A specified allowance for error

from a desired or measured quantity.

TORQUE

A force that produces rotation. A turning or twisting force. (From the Latin *torquere* - to twist. Also the root word for torture.)

TRACK CABLE CYLINDER

A cable cylinder with hardened ground shafts and a guided carrier within linear bearings, giving the cylinder the ability to guide and support moderate work loads.

TRIAC AC REED SWITCH

These switches are designed for signaling end-of-stroke position to devices such as programmable controllers. They can be used to operate ac relays and solenoids if a protection circuit is used and if current and voltage limits are observed.

TUBE DEFLECTION

Due to the nature of loads and aluminum extrusions tube deflection will occur if cylinder (linear slide) is supported only on the ends without tube supports at recommended intervals along length of cylinder.

TUBE SUPPORTS

Optional accessory for band cylinders and linear slides (base mount) to prevent tube deflection.

U

U-CUP

A synthetic rubber component with lips along its inner and outer circumferences giving a cross-section the appearance of the letter "U". When under pressure, the lips flare out, providing a tight seal in one direction and minimal drag from the non-pressurized side.

UNITS

U.S. customary: A system of weights and measures based on the pound and inches. Metric: A decimal system of weights and measures based on the kilogram and meter.

V

VALUE

A number that represents a computed or assigned quantity; or, a number contained in a data table or data file word.

VITON®

A DuPont Chemical Co. trademark for a fluorocarbon rubber used in high temperature applications. At Tolomatic, Viton® is used for seals in high temperature situations and for brakes designed to be operated with non-flammable hydraulic fluids such as phosphate-ester.

VOLT

Unit of electromotive force. It is the difference of potential required to make a current of one ampere flow through a resistance of one ohm.

VOLTAGE

The term most often used in place of electromotive force, potential, potential difference, or voltage drop. It describes the electric pressure that exists between two points and is capable of producing a flow or current when a closed circuit is connected between the two points.

VOLTAGE RATING

The maximum voltage at which a given device may be safely maintained during continuous use in a normal manner. It is also called working voltage.

W

WATT

A unit of power or a rate of doing work. The power dissipated by a one ohm resistor with one ampere of current is one watt.

Terms / Conditions of Sale

1. ORDER ACCEPTANCE. All orders or services are subject to acceptance in Minnesota by the written approval of an authorized official of Tolomatic, Inc. Any such order shall be subject to these Terms and Conditions of Sale, and acceptance shall be conditioned on Purchaser's assent to such conditions. Purchaser's assent shall be deemed given unless Purchaser shall expressly notify Tolomatic, Inc. in writing to the contrary within five (5) days after receipt of acknowledgment to confirmation of an order.

2. CANCELLATION AND CHANGES. No order accepted by Tolomatic, Inc. may be modified in any manner by Purchaser unless agreed to in writing, by an authorized official of Tolomatic, Inc. Order cancellations, including reductions to order quantities, and changes shall be governed by the following:

- a. Any standard product order scheduled for shipment within five (5) working days of purchaser's request to cancel or modify will be shipped as previously acknowledged and purchaser agrees to accept shipment and payment responsibility, in full, at the price agreed upon.
- b. "Customer Special" orders scheduled for shipment within twenty (20) working days of purchaser's request to cancel or modify will be shipped as previously acknowledged and purchaser agrees to accept shipment and payment responsibility, in full, at the price agreed upon.
- c. All work in connection with "Customer Special" orders, not covered under Paragraph b, will be stopped immediately upon notification, and purchaser agrees to reimburse Tolomatic, Inc. for all work-in-process and any materials or supplies used, or for which commitments have been made by Tolomatic, Inc. in connection therewith.

3. QUOTATIONS AND PRICES. Written quotations automatically expire 30 calendar days from the date issued unless terminated sooner by written notice. (Verbal quotations expire, unless accepted in writing, the same day.)

All published prices and discounts are subject to change without notice. In the event of a net price change, the price of product(s) on order will be the price in effect on the date of order acknowledgment.

Any addition to an outstanding order will be accepted at prices in effect when the addition is made.

4. MINIMUM BILLING. Orders amounting to less than \$35.00 net will be billed at \$35.00

5. TAXES. Any Manufacturer's Tax, Retailers Occupation Tax, Use Tax, Sales Tax, Excise Tax, Duty, Customer, Inspection or Testing Fee, or any other tax, fee or charge of any nature whatsoever, imposed by any government authority, on or measured by any transactions between Tolomatic, Inc. and Purchaser shall be paid by the Purchaser in addition to the prices quoted or involved. In the event Tolomatic, Inc. shall be required to pay any such tax, fee or charge, Purchaser shall reimburse therefore.

6. TERMS OF PAYMENT. Net invoice amount is due within 30 days from date of invoice subject to credit approval. A 2% per month service charge shall apply to all invoices not paid within 30 days. All clerical errors are subject to correction. Any invoice in not paid within 60 days will subject that account to an immediate shipping hold.

7. F.O.B. POINT. All sales are F.O.B. Tolomatic, Inc.'s facility in Hamel, Minnesota, unless quoted otherwise.

8. DELIVERY. Delivery of product(s) by Tolomatic, Inc. to a carrier shall constitute delivery to Purchaser, and regardless of freight payment, title and all risk or loss or damage in transit shall pass to Purchaser at that time.

Should shipment be held beyond scheduled date, upon request of Purchaser, product will be billed and Purchaser agrees to accept any charges for warehousing, trucking and other expenses as may be incident to such delay.

Great care is taken by Tolomatic, Inc. in crating its product. Tolomatic, Inc. cannot be held responsible for breakage after having received "In Good Order" receipts from the transporting carrier. All claims for loss and damage must be made by Purchaser to the carrier within 14 days from receipt of goods. Tolomatic, Inc. will assist insofar as practical in securing satisfactory adjustment of such claims wherever possible.

Claims for shortages or other errors must be made, in writing, within ten (10) days to Tolomatic, Inc. and any additional expense of the method or route of shipment specified by Purchaser shall be borne by the Purchaser.

9. SHIPPING SCHEDULES. All quoted shipping schedules are approximate and will depend upon prompt receipt from Purchaser of confirming copy of Purchase Order. Dimensional drawings and specifications submitted by Tolomatic, Inc. to Purchaser for approval must be returned to Tolomatic, Inc. within 10 working days, with approval granted, and any exceptions noted, in order to avoid delay in manufacturing schedules.

Orders which include penalty clauses for failure to meet shipping schedules will not be acceptable, except in those cases specifically approved in writing by the General Manager of Tolomatic, Inc.

Tolomatic, Inc. shall not be liable for damage as a result of any delay due to any cause beyond Tolomatic, Inc.'s reasonable control, including, without limitation, an Act of Nature; act of Purchaser; embargo, or other government act, regulation or request; fire; accident; strike; slow down; war; riot; flood; delay in transportation; and inability to obtain necessary labor, materials or manufacturing facilities. In the event of any such delay, the date of delivery shall be extended for a period equal to the time loss by reason of the delay. The acceptance of the product when delivered shall constitute a waiver of all claims for damages caused by any such delays.

10. RETURN OF PRODUCT. No product may be returned without first obtaining a Return Goods Authorization form and confirming memorandum from Tolomatic, Inc. Product, if accepted for credit, shall be subject to a minimum service charge of 35% of the invoice price and all transportation charges shall be prepaid by the Purchaser; however, assembled products classified as "special," such as Cable Cylinders and other products which have been modified or built as "Customer Specials," are not returnable to Tolomatic, Inc.

11. WARRANTY. Tolomatic, Inc., WARRANTS PRODUCT MANUFACTURED BY IT TO BE FREE FROM DEFECTS IN MATERIAL AND WORKMANSHIP FOR A PERIOD OF

ONE YEAR FROM DATE OF SHIPMENT BY Tolomatic, Inc. IF WITHIN SUCH PERIOD ANY SUCH PRODUCT SHALL BE PROVED TO Tolomatic, Inc.'s SATISFACTION TO BE SO DEFECTIVE, SUCH PRODUCT SHALL EITHER BE REPAIRED OR REPLACED AT Tolomatic, Inc.'s OPTION.

THIS WARRANTY SHALL NOT APPLY:

- a. TO PRODUCT NOT MANUFACTURED BY Tolomatic, Inc. WITH RESPECT TO PRODUCT NOT MANUFACTURED BY Tolomatic, Inc. THE WARRANTY OBLIGATIONS OF Tolomatic, Inc. SHALL IN ALL RESPECTS CONFORM AND BE LIMITED TO THE WARRANTY ACTUALLY EXTENDED TO Tolomatic, Inc. BY ITS SUPPLIER.
- b. TO PRODUCT WHICH SHALL HAVE BEEN REPAIRED OR ALTERED BY PARTIES OTHER THAN Tolomatic, Inc. SO AS, IN Tolomatic, Inc.'s JUDGMENT, TO AFFECT THE SAME ADVERSELY, OR
- c. TO PRODUCT WHICH SHALL HAVE BEEN SUBJECT TO NEGLIGENCE, ACCIDENT, OR DAMAGE BY CIRCUMSTANCES BEYOND THE CONTROL OF Tolomatic, Inc. OR TO IMPROPER OPERATION MAINTENANCE OR STORAGE, OR TO OTHER THAN NORMAL USE AND SERVICE.

THE FOREGOING WARRANTIES ARE EXCLUSIVE AND IN LIEU OF ALL OTHER EXPRESS AND IMPLIED WARRANTIES WHATSOEVER, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, Tolomatic, Inc. SHALL NOT BE SUBJECT TO ANY OTHER OBLIGATIONS OR LIABILITIES WHATSOEVER WITH RESPECT TO PRODUCT MANUFACTURED OR SUPPLIED BY Tolomatic, Inc. OR SERVICE RENDERED BY IT.

12. CONSEQUENTIAL DAMAGE. Tolomatic, Inc. shall not, under any circumstances, be liable for consequential damages.

13. SERVICE CHARGES. Should the Purchaser request the service of any erector, demonstrator or service man (except as specifically provided for and included in the price of the product) such service will be rendered at the rate outlined in the schedule of field service charges in effect at the date of request.
